

## **Bear and Bull Markets**

## Why in News

Recently, the many Indian indices including NSE Nifty index have entered into **'bear market' territory** in the backdrop of the declaration of the coronavirus outbreak a pandemic by the World Health Organisation (WHO).

## **Bear Market**

- A bear market refers to the market where share prices are continuously declining.
- Its downward trend makes **investors believe** that the **trend will continue**, which, in turn, perpetuates the **downward spiral**.
- It is considered **riskier to invest** in a bear market, as many equities lose value. Thus, most investors **withdraw their money from the markets**.
- During a bear market, the economy slows down and unemployment rises as companies begin laying off workers.

## **Bull Market**

- A bull market refers to a market that experiences a sustained increase in market share prices.
- It ensures investors that the uptrend will continue over the long term.
- It signifies that the country's **economy is strong** and **employment levels are high**.
