

Drop in Institutional Deliveries

Why in News

Recently, the data from the states of **Chhattisgarh and Jharkhand** has reported a **drop in the institutional deliveries.**

Key Points

Current Scenario in Two States:

- **Chattisgarh:** It has recorded a **drop by 15.39 % in April** compared to the numbers recorded in March.
 - In February 2020, before the lockdown was imposed, the State had recorded 37,984 institutional deliveries. But following the lockdown, the number of institutional deliveries fell to 32,529.
 - The State has recorded an increase in the percentage of institutional deliveries from 44.9 to 70.2 between NFHS 3 (2005-06) and NFHS 4 (2015-16).
- Jharkhand: The state had listed 52,000 women for scheduled deliveries in May, out of these only 5.9 % of these were conducted in medical institutions by May 21.
 - The State has recorded an increase in the percentage of institutional deliveries from 40.1 % to 61.9 % between NFHS 3 (2005-06) and NFHS 4 (2015-16).

Reasons for Drop in Institutional Deliveries:

- The public transport has been majorly affected due to <u>nationwide lockdown</u> imposed to contain the spread of the <u>Covid-19 pandemic</u>. Thus reaching hospitals from villages became difficult.
- The declared Covid-19 hospitals have created a **fear of infection** and thus people are **avoiding physical contacts** with the hospitals.
- Many deliveries are being carried out at small private nursing homes to avoid movement and related Covid-19 spread.
- The entire health machinery is battling Covid-19, so **non-Covid health services experience a lack of medical staff.**

Institutional Deliveries in India

Description:

- Institutional delivery means giving birth to a child in a medical institution under the overall supervision of trained and competent health personnel.
- It also signifies an availability of amenities to handle the situation and save the life of the mother and child.

National Scenario:

 Over the past two decades, India has made progress in increasing the number of institutional deliveries.

- According to the **National Family Health Survey (NFHS-4)**, institutional deliveries have **increased from 39% in 2005-06 to 79% in 2015-16.**
- Further, the institutional births in public institutions have **increased from 18% to 52%** in the same time period.
- Step Taken to Increase Institutional Deliveries:
 - Janani Suraksha Yojana: <u>Janani Suraksha Yojana (JSY)</u> is a 100% <u>centrally</u>
 <u>sponsored scheme</u> which is being implemented with the objective of **reducing maternal** and **infant mortality** by promoting institutional delivery among pregnant women.
 - Pradhan Mantri Surakshit Matritva Abhiyan (PMSMA): It has been launched to focus on conducting special AnteNatal Check-ups (ANC) check up on 9th of every month with the help of Medical officers to detect and treat cases of anaemia.
 - Pradhan Mantri Matru Vandana Yojana (PMMVY): It is a maternity benefit programme being implemented in all districts of the country with effect from 1st January, 2017
 - **LaQshya Programme**: <u>LaQshya (Labour room Quality Improvement Initiative)</u> intended to improve the quality of care in the labour room and maternity operation theatres in public health facilities.

Way Forward

- The entire health machinery is battling Covid-19 but non-Covid health services **should not compromise** which are the **base of the health infrastructure** of the country.
- The government should ensure adequate availability of medical staff, emergency medical services such as ambulance, vaccinations, maternity care, etc. to the urban as well as rural areas.
- The **balance of the Covid and non-Covid medical services** is need of the hour and the government needs to ensure the implementation of the same in the future.
