

Abhyas High-speed Expendable Aerial Target

Why in News

Recently, the **Defence Research and Development Organisation** (DRDO) conducted successful flighttests of the indigenously-designed **Abhyas High-speed Expendable Aerial Target (HEAT)** in Balasore (Odisha).

• Two demonstrator vehicles of Abhyas cleared all the evaluation parameters like 5 km flying altitude, vehicle speed of **0.5 mach (half the speed of sound),** endurance of 30 minutes etc.

Key Points

- **Designed and developed by:** Aeronautical Development Establishment (ADE) of DRDO.
 - Aeronautical Development Establishment (ADE) is a key Aeronautical Systems Design Laboratory under DRDO.
 - It is involved in the design and development of the state-of-the-art Unmanned Aerial Vehicles (UAV) and Aeronautical Systems and technologies to meet the requirements of the Indian Armed forces.
- Features:
 - It is a drone (UAV) that will be used as a target for various missile systems.
 - It is powered by a small gas turbine engine.
 - Navigation by Micro-electromechanical (MEMS) systems based Inertial Navigation System (INS) for navigation.
 - MEMS is a process technology used to create tiny integrated devices or systems

that combine mechanical and electrical components.

- It is lightweight and reliable, consumes less power and is cost-effective.
- Programmed for fully autonomous flight.
- Uses: As a target for evaluation of various Missile systems.
- Background: This is the second time that the target vehicle was flight-tested successfully. The <u>first successful test was in May 2019.</u>
- Others: Recently, the DRDO successfully flight tested the <u>Hypersonic Technology</u> <u>Demonstrator Vehicle</u> (HSTDV).
