

Invasive Species and Food Crisis in Karnataka's Western Ghats

- Invasive plants such as Lantana, Prosopis and Chromolaena have reduced the availability of food and **shelter** for herbivores, which in turn affects the carnivores that depend on them **in** Karnataka's Western Ghats.
 - An <u>invasive species</u> refers to a **non-native species** that, when introduced to a new environment, exhibits aggressive growth and spreads rapidly, often causing harm to the native ecosystem.
- Invasive plants can outcompete and displace native vegetation, disrupt ecological balance and the movement and migration of animals.
- Several rainforest complexes, including Nagarahole, Anshi National Park, Kudremukh National Park and Bhimgad Wildlife Sanctuary, are suffering from invasive species. The Vision
