

Census in India

Overview

- Definition:
 - <u>Population Census</u> is the total process of collecting, compiling, analyzing and disseminating demographic, economic and social data pertaining, at a specific time, of all persons in a country or a well-defined part of a country.
 - It also **provides the trends in population** characteristics.
 - The Indian Census is one of the largest administrative exercises undertaken in the world.

Nodal Ministry:

- The decennial Census is conducted by the <u>Office of the Registrar General and Census</u> <u>Commissioner</u>, Ministry of Home Affairs.
- Until 1951, the Census Organisation was set up on an ad-hoc basis for each Census.

Legal/Constitutional Backing:

- Census is conducted under the provisions of the Census Act, 1948.
 - The bill for this Act was piloted by <u>Sardar Vallabhbhai Patel</u>, the then Home Minister of India.
- The population census is a **Union subject under Article 246** of India Constitution.
 - It is listed at **serial number 69** of the **seventh schedule** of the constitution.

Confidentiality of Information:

- The information collected during the population Census is so confidential that it is **not even accessible to the courts of law.**
 - The confidentiality is guaranteed by the **Census Act, 1948.** The law specifies penalties for both public and census officials for non-compliance or violation of any provision of the Act.

Significance of Census:

- Source of Information: The Indian Census is the largest single source of a variety of statistical information on different characteristics of the people of India.
 - Researchers and Demographers use census data to analyze growth and trends of population and make projections.
- Good Governance: The data collected through the census is used for administration, planning and policy making as well as management and evaluation of various programmes by the Government.
- Demarcation: Census data is also used for <u>demarcation of constituencies</u> and allocation of representation to Parliament, State legislative assemblies and the local bodies.
- Better Access for Businesses: The census data is also important for business houses and industries for strengthening and planning their business for penetration into

- areas, which had hitherto remained, uncovered.
- Giving Grants: Finance Commission provides grants to the states on the basis of population figures available from the Census data.

History of Census

- Ancient and Medieval Period:
 - **Rigveda:** The earliest literature 'Rig-Veda' reveals that some kind of population count was **maintained during 800-600 BC** in India.
 - **Arthashastra:** 'Arthashastra' **by 'Kautilya'** written in the 3rd Century BC prescribed the collection of **population statistics as a measure of state policy for taxation.**
 - Ain-i-Akbari: During the regime of the Mughal king Akbar, the administrative report 'Ain-e-Akbari' also included comprehensive data pertaining to population, industry, wealth and many other characteristics.
- Pre-independence Period:
 - Initial Attempts:
 - The history of the census began with 1800 when England had begun its Census.
 - In its continuation, a census was conducted in **Allahabad** (1824) and in **Banaras** (1827-28) by **James Prinsep.**
 - The first complete census of an Indian city was conducted in 1830 by Henry Walter in Dacca (now Dhaka).
 - The Second Census was conducted in 1836-37 by Fort St. George.
 - In 1849, the Government of India ordered the local governments to conduct **quinquennial** (five-yearly) returns of population.
 - First Non-synchronous Census: It was conducted in India in 1872 during the reign of Governor-General Lord Mayo.
 - **First Synchronous Census:** The first synchronous census was taken under British rule on February 17, 1881, by **W.C. Plowden** (Census Commissioner of India).
 - Since then, censuses have been undertaken **uninterruptedly** once every ten years.

Major Events/Findings in India's Census

- First Census (1881):
 - It laid main emphasis on the classification of demographic, economic and social characteristics of the entire continent of British India (except Kashmir and French and Portuguese colonies).
- Second Census (1891):
 - It was conducted almost on the same pattern as of the 1881 census.
 - Efforts were made for 100% coverage and the Upper part of present-day **Burma**, **Kashmir** and **Sikkim** were also included.
- Third Census (1901):
 - In this Census, Balochistan, Rajputana, Andaman Nicobar, Burma, Punjab and remote areas of Kashmir were also included.
- Fifth Census (1921):
 - The decade of 1911-21 has been the only one till now to witness a decadal population decline of 0.31%.
 - This was the decade that ended in the <u>flu pandemic of 1918</u> which cost at least 12 million lives.

- India's population was continuously increasing until Census 1921 and still has been doing so after the 1921 Census.
 - Therefore, the census year of 1921 is called the year of **"The Great Divide"** in the demographic history of India.

• Eleventh Census (1971):

- It was the second Census after independence.
- It added a question for information on fertility for currently married women.

Thirteenth Census (1991):

- It was the fifth Census of independent India.
- In this Census, the **concept of literacy was changed and the children of the 7+ age group were considered literate** (as compared to 1981 when children up to the age group of 4+ were treated as literate).

Fourteenth Census (2001):

- It witnessed a quantum leap in the technology front.
- The schedules for the phases were scanned through high speed scanners and handwritten data from the schedules were converted into digitized form through Intelligent Character Reading (ICR).
 - An ICR captures handwriting from image files. It is an advanced version of Optical Character Recognition (OCR) technology in which printed characters are captured.

Fifteenth Census (2011):

- In the 2011 Census, significant fall in case of EAG States (Empowered action group states: UP, Uttarakhand, Bihar, Jharkhand, MP, Chhattisgarh, Rajasthan & Orissa) was noticed for the first time.
- Sixteenth Census (2021):
 - Census 2021 was postponed owing to the outbreak of Covid-19 pandemic.
 - However, it will be the first digital Census, also with a provision for self-enumeration.
 - It is for the first time that information of households headed by a person from the
 <u>Transgender Community</u> and members living in the family will be collected.
 - Earlier there was a column for male and female only.

Socio-Economic and Caste Census (SECC)

About:

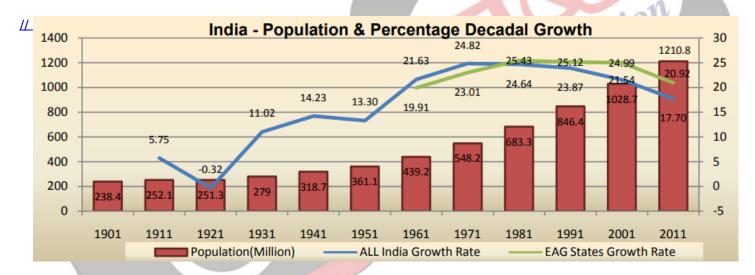

- The <u>Socio-Economic and Caste Census (SECC)</u> was conducted in 2011 for the first time since 1931.
- It seeks to canvass every Indian family in rural and urban India, and ask about their:
 - **Economic status,** to allow Central/State authorities to come up with a range of indicators of deprivation which could be used by each authority to define a poor or deprived person.
 - **Specific caste name,** to allow the government to re-evaluate which caste groups are economically worse off and which are better off.

Difference Between Census & SECC:

- **Field of Coverage:** The Census provides a portrait of the Indian population while the **SECC is a tool to identify beneficiaries of state support.**
- Confidentiality of Data: The Census data is considered confidential, whereas the data of SECC is open for use by Government departments to grant and/or restrict benefits to the people.

Significance of SECC:

- **Better Mapping of Inequalities:** SECC has the potential to allow for a mapping of inequalities at a broader level.
 - It will be useful to establish statistical justification for **preserving caste-based affirmative action programmes** or welfare schemes.
- Legally Imperative: It is also legally imperative as the courts require a 'quantifiable data' to support the existing levels of reservation.
- **Constitutional Mandate:** The Constitution of India also favours conducting a caste census.
 - **Article 340** mandates the appointment of a commission to investigate the conditions of **socially and educationally backward classes** and make recommendations as to the steps that should be taken by governments.
- Associated Concerns with SECC:
 - **Repercussions of a Caste Census:** Caste has an emotive element and thus there exist the political and social repercussions of a caste census.
 - There have been concerns that **counting caste may help solidify or harden** identities.
 - Due to these repercussions, nearly a decade after the SECC, a sizable amount of its data remains unreleased or released only in parts.
 - Caste is Context-specific: Caste has never been a proxy for class or deprivation in India;
 it constitutes a distinct kind of embedded discrimination that often transcends class.
