

India Extends Aid to Zambia Amid Cholera Outbreak

Source: TH

India has stepped in to provide **medical and material assistance to Zambia,** grappling with a <u>cholera</u> **outbreak.**

- India dispatched water purification supplies, chlorine tablets, and oral rehydration solution (ORS) sachets to Zambia.
- Cholera is an acute diarrhoeal infection caused by ingestion of food or water contaminated with the bacterium Vibrio cholerae.
 - It remains a global threat to public health and an indicator of inequity and lack of social development.
 - Researchers have estimated that each year there are 1.3 to 4.0 million cases of cholera and 21,000 to 143,000 deaths worldwide due to cholera.
- Most of those infected have no or mild symptoms and can be successfully treated with ORS.
 - Currently there are three <u>World Health Organization (WHO)</u> pre-qualified oral cholera vaccines (OCV): Dukoral, Shanchol, and Euvichol. All three vaccines require two doses for full protection.
