

Gold ETF Inflows Surge Amidst Economic Uncertainty

Source: ET

In January 2024, <u>Gold Exchange Traded Funds (ETFs)</u> witnessed a remarkable surge in inflows, reaching **Rs 657 crore**. This influx contributed to a **1.6% rise in the assets under management** (AUM) of gold funds.

- Experts attribute this surge to the enduring appeal of gold as a safe haven and hedge against inflation, particularly amidst ongoing geo-political tensions and elevated inflation in the US.
- Gold ETFs are passive investment instruments representing physical gold which may be in paper or dematerialised form. Each unit of a Gold ETF usually represents a fixed amount of gold, often 1 gram.
 - Gold ETFs combine the flexibility of stock investment and the simplicity of gold investments.
- Investing in Gold ETFs entails acquiring gold in an electronic format, allowing individuals to engage in buying and selling activities just like stock trading.
 - They offer liquidity and exposure to gold prices without the hassle of owning and storing physical gold.
