

Hurricane Nana

Why in News

Atlantic Hurricane Nana has made a landfall on the coast of Belize.

- The country Belize is located on the northeast coast of Central America.
- Few days back, <u>Hurricane Laura</u> made landfall in southwestern Louisiana (South Central United States).

Key Points

- Tropical Cyclone:
 - A hurricane is a **type of storm called a tropical cyclone**, which forms over tropical or

- subtropical waters.
- A tropical cyclone is a rotating low-pressure weather system that has organized thunderstorms but no fronts (a boundary separating two air masses of different densities).

Speed of Winds:

- Tropical cyclones with maximum sustained surface winds of less than 39 miles per hour (mph) are called tropical depressions.
- Those with maximum sustained winds of 39 mph or higher are called tropical storms.
- When a storm's maximum sustained winds reach **74 mph,** it is called a **hurricane**.

Measurement of Wind Speed:

- The **Saffir-Simpson Hurricane Wind Scale** is a **1 to 5 rating**, or category, based on a hurricane's maximum sustained winds.
- The higher the category, the **greater the hurricane's** potential for property **damage.**

Formation:

- There needs to be warm ocean water and moist, humid air in the region.
- When humid air is flowing upward at a zone of low pressure over warm ocean water, the
 water is released from the air as creating the clouds of the storm.

Features:

- It has a low pressure centre and clouds spiraling towards the eyewall surrounding the "eye", the central part of the system where the weather is normally calm and free of clouds.
- Its diameter is typically around 200 to 500 km, but can reach 1000 km.
- The winds blow counterclockwise in the Northern Hemisphere and clockwise in the Southern Hemisphere.
- A tropical cyclone brings very violent winds, torrential rain, high waves and, in some cases, very destructive storm surges and coastal flooding.

Different Names:

- Hurricane: Caribbean Sea, Gulf of Mexico, North Atlantic Ocean and the eastern and central North Pacific Ocean
- Typhoon: Western North Pacific
- · Cyclone: Bay of Bengal and Arabian Sea
- Willy-willies: Australia
