

Declining Hangul Population

The <u>Hangul</u> (or Kashmiri Stag) **population monitoring exercise** has revealed an alarming decline in the fawn-hind and stag-hind ratio of the hangul population in **Kashmir**.

- Exercise was conducted by the **Department of Wildlife Protection**, Jammu & Kashmir (DWLP) in collaboration with the **Wildlife Institute of India** (WII).
- Fawn is a young deer in its first year and Hind is a female deer, over three years old and her counterpart, the mature male, is called a stag.
- The male-female and fawn-female ratios, is crucial for the management and conservation of deer populations.
- Although hangul is limited to the **Dachigam Wildlife Sanctuary** near Srinagar, but a small population has also been witnessed in **Overa-Aru Wildlife Sanctuary** in south Kashmir.
- The Kashmir stag is the state animal of Jammu and Kashmir and is the only surviving species of red deer in India.

Dachigam Wildlife Sanctuary

- Dachigam (stands for 'ten villages') National Park is located about 22 Kilometers from Srinagar, lammu and Kashmir.
- Fauna: The main animal species that Dachigam is most famous for is the hangul, or the Kashmir stag.
- Flora: floral wealth of the park is extremely diverse and a significant part of its ecosystem and includes walnut, apricot, apple, pear, and wild cherry, plum, chestnut, willow, oak and birch trees.
