

The Hiroshima Al Process for Global Al Governance

For Prelims: The Hiroshima AI Process, Global AI Governance, Generative AI, G-7, OECD, GPAI, IPR.

For Mains: The Hiroshima AI Process for Global AI Governance.

Why in News?

Recently, the annual <u>G7 Summit</u> held in Hiroshima, Japan, initiated the <u>Hiroshima Al Process</u> (HAP), which is likely to conclude by <u>December 2023</u>, signaling a significant step towards regulating <u>Artificial Intelligence</u> (AI).

 The G7 Leaders' Communiqué recognized the importance of inclusive Al governance and set forth a vision of trustworthy Al aligned with shared democratic values.

What is the Hiroshima Al Process?

- About:
 - The HAP aims to **facilitate international discussions on inclusive AI governance** and interoperability to achieve a common vision and goal of trustworthy AI.
 - It recognizes the growing prominence of <u>Generative AI (GAI)</u> across countries and sectors and emphasizes the need to address the opportunities and challenges associated with it.
- Working:
 - The HAP will operate in cooperation with international organizations such as the
 Organisation for <u>Economic Co-operation and Development (OECD)</u> and the <u>Global</u>
 Partnership on Al (GPAI).
- Objectives:
 - The HAP aims to govern Al in a way that upholds **Democratic values**, ensures fairness and accountability, promotes transparency, and prioritizes the safety of Al technologies.
 - It seeks to establish procedures that encourage openness, inclusivity, and fairness in Al-related discussions and decision-making processes.

What are the Potential Challenges and Outcomes?

- The HAP faces challenges due to differing approaches among G7 countries in regulating Al risks. However, it aims to facilitate a common understanding on important regulatory issues while preventing complete discord.
- By involving multiple stakeholders, the HAP strives to find a balanced approach to AI governance that considers diverse perspectives and maintains harmony among G7 countries.
- For now, there are three ways in which the HAP can play out,
 - It may enable the G7 countries to move towards a divergent regulation based on shared norms, principles and guiding values.
 - It becomes **overwhelmed by divergent views** among the G7 countries and fails to deliver any meaningful solution.

• It delivers a mixed outcome with some convergence on finding solutions to some issues but is unable to find common ground on many others.

How can the HAP Resolve the issue of IPR in relation to GAI?

- Currently, there is ambiguity regarding the relationship between Al and IPR (Intellectual Property Rights), leading to conflicting interpretations and legal decisions in different jurisdictions.
- The HAP can contribute by **establishing clear rules and principles regarding AI and IPR**, helping the G7 countries reach a consensus on this matter.
- One specific area that can be addressed is the application of the "Fair Use" doctrine, which
 permits certain activities such as teaching, research, and criticism without seeking
 permission from the copyright owner.
 - However, whether using copyrighted material in machine learning qualifies as fair use is a subject of debate.
- By developing a common guideline for G7 countries, the HAP can provide clarity on the
 permissible use of copyrighted materials in machine learning datasets as fair use, with
 certain conditions. Additionally, it can distinguish between the use of copyrighted materials
 for machine learning specifically and other Al-related uses.
- Such efforts can significantly impact the global discourse and practices surrounding the intersection of AI and intellectual property rights.

How is Global AI currently Governed?

India:

- NITI Aayog, has issued some guiding documents on Al Issues such as the National Strategy for Artificial Intelligence and the Responsible Al for All report.
- Emphasises social and economic inclusion, innovation, and trustworthiness.

US:

- The US released a Blueprint for an **AI Bill of Rights (AIBoR)** in 2022, outlining the harms of AI to economic and civil rights and lays down five principles for mitigating these harms.
- The Blueprint, instead of a horizontal approach like the EU, endorses a sectorally specific approach to AI governance, with policy interventions for individual sectors such as health, labour, and education, leaving it to sectoral federal agencies to come out with their plans.

China:

- In 2022, China came out with some of the world's first nationally binding regulations targeting specific types of algorithms and AI.
- It enacted a law to regulate recommendation algorithms with a focus on how they disseminate information.

- EU:

- In May 2023, the European Parliament reached a <u>Preliminary Agreement on a new</u>
 <u>draft</u> of the <u>Artificial Intelligence Act</u>, which aims to regulate systems like <u>OpenAl's</u>
 ChatGPT.
 - The legislation was drafted in 2021 with the aim of bringing transparency, trust, and accountability to Al and creating a framework to mitigate risks to the safety, health, **Fundamental Rights**, and democratic values of the EU.

Way Forward

- Non-G7 countries also have the opportunity to launch similar processes to influence global Al governance. This shows that Al governance has become a global issue, with more complexity and debates expected in the future.
- In this context, the Indian government **should take proactive steps by creating an open-source AI risk profile**, setting up controlled research environments for testing high-risk AI models, promoting explainable AI, defining intervention scenarios, and maintaining vigilance.
- It is important to establish a simple regulatory framework that defines AI capabilities and

- identifies **areas prone to misuse.** Prioritizing data privacy, integrity, and security while ensuring data access for businesses is crucial.
- Enforcing mandatory explainability in AI systems will enhance transparency and help businesses understand the reasoning behind decisions.
- Policymakers should strive to strike a balance between the scope of regulation and the language used, seeking input from various stakeholders, including industry experts and businesses. This way forward will contribute to effective AI regulations that address concerns and promote responsible AI deployment.

UPSC Civil Services Examination, Previous Year Questions (PYQs)

Q. With the present state of development, Artificial Intelligence can effectively do which of the following? (2020)

- 1. Bring down electricity consumption in industrial units
- 2. Create meaningful short stories and songs
- 3. Disease diagnosis
- 4. Text-to-Speech Conversion
- 5. Wireless transmission of electrical energy

Select the correct answer using the code given below:

(a) 1, 2, 3 and 5 only

(b) 1, 3 and 4 only

(c) 2, 4 and 5 only

(d) 1, 2, 3, 4 and 5

Ans: (b)
