

# **Gateway of Hell: Turkmenistan**

### Why in News

Recently, Turkmenistan has decided to find a way to extinguish a fire in a huge <u>natural gas</u> (Mixture of methane, carbon dioxide, nitrogen, hydrogen sulphide and helium) the **Darvaza gas crater** also known as the **'Gateway to Hell'**.

- Turkmenistan has been at the **centre of methane leakages.** Out of the 50 most severe methane gas leakages onshore oil and gas operations in 2019, 31 were in Turkmenistan.
- In addition to this, one of these leakages, "had a climate impact roughly equivalent to the annual emissions of all the cars in Arizona".

### **Severity of Methane Leaks**

- Methane is the primary contributor to the formation of ground-level ozone, a hazardous air pollutant and greenhouse gas, exposure to which causes 1 million premature deaths every year.
- Methane is also a powerful greenhouse gas. Over a 20-year period, it is 80 times more potent at warming than carbon dioxide.

## **Key Points**

- Located in the Karakum desert, 260 kilometres away from Turkmenistan's capital,
  Ashgabat, the crater has been burning for the last 50 years.
- The crater has become a significant tourist attraction in the country. In 2018, the country's president officially renamed it as the "Shining of Karakum".

### Origin of Crater:

- The details of the origin are not actually known but it has been said that the crater was created in 1971 during a Soviet drilling operation.
  - Soviet geologists were drilling for oil in the Karakum desert when **they hit a pocket of natural gas by mistake, which caused the earth to collapse** and ended up forming three huge sinkholes.
  - A **sinkhole** is a depression in the ground that has no natural external surface drainage. These are regions formed **when underlying limestone bedrock is dissolved** by groundwater.
- Locals have also said that the crater was formed in the 1960s but wasn't lit on fire until the 1980s.
- It has also been said that since oil and gas were very expensive commodities during Soviet rule, the formation of the crater has remained a confidential piece of information.

#### Reason for Closing:

- It **negatively affects both the environment and the health** of the people living nearby.
- Loss of valuable natural resources for which they can get significant profits and use them for improving the wellbeing of people.

The Vision

 Hinders the accelerated industrial development of the subsoil riches of central Karakum.
