

NASA's PREFIRE Mission

[Source: IE](#)

[National Aeronautics and Space Administration \(NASA\)](#) has recently launched a pair of miniature satellites, called [CubeSats \(6U\)](#) to measure the **heat lost from the Earth's poles.**

- The **PREFIRE (Polar Radiant Energy in the Far-InfraRed Experiment)** mission aims to fill a critical gap in understanding the planet's energy budget by studying the **heat emissions from the Earth's poles.**
 - The mission involves **two CubeSats** equipped with thermal infrared spectrometers to measure the amount of **infrared and far-infrared radiation emitted from the Arctic and Antarctica.**
- This data will help scientists better understand the balance between incoming and outgoing heat, which is crucial for **predicting changes in the Earth's ice, seas, and weather patterns.**
- A **cube satellite (cubesat)** is a **standardized, low cost, small satellite** design typically used for technological demonstration and research. It is a **Nanosatellite** - weighs less than 10 kgs.
 - These are relatively inexpensive and can be launched in larger numbers, making them a valuable tool for scientific research and technology demonstrations.
