

## **Extension RoDTEP Scheme**

## Why in News

Recently, the Government has decided to **extend the benefit** of the Scheme for <u>Remission of Duties</u> and <u>Taxes on Exported Products (RoDTEP)</u> to all export goods.

## **Key Points**

- Remission of Duties or Taxes on Export Product (RoDTEP):
  - The scheme was announced in 2020 as a replacement for the <u>Merchandise Export from India Scheme (MEIS)</u>, which was not compliant with the rules of the <u>World Trade</u> <u>Organisation</u>.
    - Following a complaint by the US, a dispute settlement panel had ruled against India's use of MEIS as it had found the duty credit scrips awarded under the scheme to be inconsistent with WTO norms.
    - The RoDTEP scheme would refund to exporters the embedded central, state and local duties or taxes that were so far not being rebated or refunded and were, therefore, placing India's exports at a disadvantage.
  - Significance:
    - Indian **exporters** will be able to **meet the international standards** for exports as affordable testing and certification will be made available to exporters within the country instead of relying on international organizations.
    - Also under it, tax assessment is set to become fully automatic for exporters. Businesses will get access to their refunds for GST via an automatic refund-route.
    - This would increase the economy for the country and working capital for the enterprise.
- Extension of Benefits:
  - The government has decided to extend the benefits of the RoDTEP to all export goods starting 1<sup>st</sup> january 2021.
    - Initially, the scheme was expected to be limited to around three sectors to start with due to limited resources.
  - The rates under this scheme, which are expected to be notified soon, will be applicable from 1<sup>st</sup> january 2021 to all eligible exports of goods.
  - Reason for Extension:
    - It will boost the export sector of the country.
    - So far refunds were not taking place, adversely impacting exports.
      - India's exports fell 8.74% in November, steeper than 5.12% dip in October.
