

# **Sundarbans**

For Prelims: Sundarbans, Estuarine crocodile, Water monitor lizard, Gangetic dolphin, Olive ridley turtle,

Bay of Bengal

For Mains: Sundarbans, Challenges Related to Sundarban

Source: Statesman

## Why in News?

Recently, a study conducted by prominent environmental scientists has warned about the substantial threat of <u>air pollution</u> to the <u>Sundarbans</u>, an essential <u>mangrove ecosystem</u> in West Bengal.

### What is Sundarbans?

#### About:

- The Sundarbans hosts the largest mangrove forests in the world, lying on the delta of the Ganges, Brahmaputra and Meghna rivers on the Bay of Bengal.
- The mangrove ecosystem is a **ecotone** between the land and the sea in the tropical and subtropical regions.

#### Flora and Fauna:

- Due to the ecotonic effect this zone fosters a rich blend of habitats, from freshwater swamps and intertidal mangroves to saline forests and open water.
  - The Sundarbans is a sanctuary for a wide variety of species from different habitats, including rare and globally threatened wildlife such as the <u>estuarine crocodile</u>, water monitor lizard, <u>Gangetic dolphin</u>, and <u>olive ridley turtle</u>.

#### Protection:

- 40% of Sundarban lies in India and the rest in Bangladesh.
- It was designated a <u>UNESCO World Heritage site</u> in 1987 (India) and 1997 (Bangladesh).
- Sundarban Wetland, India was recognised as the 'Wetland of International Importance' under the Ramsar Convention in January 2019.
- Project Tiger: Royal Bengal Tigers in the Sundarbans are top predators that control prey
  populations, preventing overgrazing and maintaining the delicate balance of the
  ecosystem.
  - **Protecting tigers** also safeguards a vast habitat for other plant and animal species, contributing to a **healthy forest ecosystem** in the Sundarbans.
- In 2011, India and Bangladesh signed an MoU on Conservation of the Sundarbans, recognising the need to monitor and conserve the Sundarbans.

### What are the Challenges Faced by the Sundarbans?

 Rising Sea Levels: A consequence of climate change, rising sea levels threaten to inundate lowlying mangroves. This saltwater intrusion disrupts their delicate balance and makes them more vulnerable to storm surges during cyclones.

- Increased Intensity of Cyclones: Climate change is also linked to more frequent and intense storms. These cyclones can batter mangroves, causing **physical damage** and disrupting sediment patterns crucial for their survival.
- Cash and Food Crops: The conversion of mangrove forests for agriculture like cash crops (palm oil) or food production (rice paddies) destroys their habitat.
  - This not only reduces the area available for these ecosystems but also fragments existing ones, impacting biodiversity.
- Loss of Ecosystem Services: Mangroves provide crucial services like shoreline protection and nursery grounds for fish. Deforestation disrupts these services, impacting coastal communities and fisheries.
- **Threat to Wildlife:** The loss of mangrove habitats due to <u>climate change</u> is leading to the loss of species in the near-threatened or endangered category.
  - Settlement mangroves used to be safe havens for diverse molluscs and crustaceans, but they are disappearing due to polluted discharges and breeding activities of these species.
- **Effect of Pollutants**: Pollutants, enriched with <u>black carbon</u> or soot particles, from nearby urban areas and the entire <u>Indo-Gangetic Plain region</u> are worsening the air quality of the Sundarbans, impacting its ecosystem.
  - These air pollutants significantly affect the ecology and biogeochemistry of the Sundarbans mangrove ecosystem.

## **Way Forward**

- Protecting Streambanks: Cultivating <u>native grass species</u> like wild rice, *Myriostachya wightiana*, biscuit grass, and salt couch grass can stabilise streambanks and prevent erosion, instead of introducing non-local species like vetiver, which are not salt-tolerant.
- Promoting Sustainable Agriculture: Promoting soil-tolerant paddy varieties and organic agriculture practices can increase agricultural productivity and income for farmers while minimising environmental impact.
  - Implementing <u>rainwater harvesting</u> and <u>watershed development initiatives</u> will further enhance agricultural production.
- Wastewater Treatment: Using natural processes and microorganisms for wastewater treatment, such as lactic acid bacteria and photosynthetic bacteria, can support water quality and ecosystem health.
- India-Bangladesh Collaboration: The India-Bangladesh Joint Working Group (JWG) should be transformed into a high-powered board of interdisciplinary experts to plan and implement climate resilience for the Sundarbans and the communities dependent on it.
- Innovative Solutions: The corrective measures include solar energy promotion, electric transportation, subsidised LPG, regulated tourism, closing down of pollutant factories, regulation of brick kilns and land use and <u>strengthening of coastal regulations</u>.
- Multi-Sectoral Approach: A multilayered approach to multi-engagement and multidimensional planning can be followed by the ministries of tourism, <u>disaster management</u>, agriculture, fisheries, and rural development.

### **Drishti Mains Question:**

Q. Discuss the environmental and socio-economic challenges faced by the Sundarbans region. Suggest measures for sustainable development and conservation in the region.

## **UPSC Civil Services Examination, Previous Year Question (PYQ)**

#### Prelims:

- Q. Consider the following protected areas: (2012)
  - 1. Bandipur
  - 2. Bhitarkanika
  - 3. Manas

4. Sundarbans

## Which of the above are declared Tiger Reserves?

- (a) 1 and 2 only
- **(b)** 1, 3 and 4 only
- (c) 2, 3 and 4 only
- (d) 1, 2, 3 and 4

Ans: (b)

- Q. With reference to India's biodiversity, Ceylon frogmouth, Coppersmith barbet, Gray-chinned minivet and White-throated redstart are (2020)
- (a) Birds
- (b) Primates
- (c) Reptiles
- (d) Amphibians

Ans: (a)

## **Mains**

- **Q**. "The most significant achievement of modern law in India is the constitutionalization of environmental problems by the Supreme Court." Discuss this statement with the help of relevant case laws. **(2022)**
- **Q**. "Policy contradictions among various competing sectors and stakeholders have resulted in inadequate 'protection and prevention of degradation' to the environment." Comment with relevant illustrations. **(2018)**
