AI-Based Fire Detection System

Why in News?

Recently, The <u>Pench Tiger Reserve (PTR)</u> has launched an advanced <u>Artificial Intelligence-based system</u> for early detection of <u>forest fires.</u>

Key Points

- The new system features a **high-resolution camera** with a visual range of 15 km, effectively covering more than 350 sq km of the reserve.
- The Al-powered platform, known as Pantera, leverages both the camera feed and satellitebased data to provide real-time alerts of forest fires within three minutes.
 - The system also receives **weather data related to temperature, precipitation, wind, etc,** and analysing data with past fires, the system forecasts the probable future fires in the short term, which **helps in planning fire control.**

Pench Tiger Reserve (PTR)

- PTR is the joint pride of both Madhya Pradesh and Maharashtra.
- The Reserve is located in the southern reaches of the <u>Satpura hills</u> in the Seoni and Chhindwara districts in Madhya Pradesh, and continues in Nagpur district in Maharashtra as a separate Sanctuary.
 - It was declared a <u>National Park</u> by the Government of Maharashtra in 1975 and the identity of a <u>tiger reserve</u> was granted to it in the year 1992.
 - However, PTR Madhya Pradesh was granted the same status in 1992-1993. It is one of the major Protected Areas of <u>Satpura-Maikal ranges</u> of the <u>Central Highlands</u>.
- It is among the sites notified as <u>Important Bird Areas (IBA)</u> of India.
 - The IBA is a programme of Birdlife International which aims to identify, monitor and protect a global network of IBAs for conservation of the world's birds and associated diversity.
