

Comprehensive Immunisation Schedule for Women

Source: TH

The Federation of Obstetric and Gynaecological Societies of India (FOGSI) has introduced a comprehensive immunisation schedule for women aimed at increasing awareness and uptake of adult vaccines across India. This initiative aims to improve women's health quality, recognizing that women spend 25% more time in poor health compared to men.

- This initiative marks a significant step in addressing <u>vaccine-preventable diseases (VPDs)</u> among women.
 - VPDs are caused by bacteria or viruses and can be prevented with vaccines. They can
 result in long-term illness, hospitalisation, and death. Examples of VPDs
 include chickenpox, diphtheria, and poliovirus infection.
- The Government of India has initiated two major efforts to increase immunisation coverage in the country.
 - The <u>Universal Immunization Programme (UIP)</u> provides free immunisation immunisation against 12 vaccine-preventable diseases, including 9 nationally targeted diseases such as <u>Diphtheria</u>, Pertussis,
 Tetanus, Polio, <u>Measles</u>, <u>Rubella</u>, severe <u>Childhood Tuberculosis</u>, <u>Hepatitis B</u>, and <u>Meningitis & Pneumonia</u> caused by <u>Haemophilus influenzae type B</u>.
 - Additionally, <u>Mission Indradhanush</u> was launched in 2014 to reach children who missed their vaccinations under the UIP. It has reached over 2.53 crore children and 68 lakh pregnant women with life-saving vaccines through its four phases.
- FOGSI supports Obstetrics and Gynecology practitioners in India by promoting healthcare services, reproductive rights, and reducing <u>maternal mortality</u>.
