

Archaeological Sites Discovered in Telangana

Source: TH

Recently, three new archaeological sites were discovered in Telangana by a team of archaeologists led by Prof. K.P. Rao.

- A unique Iron Age megalithic site having over 200 monuments with a new type of megalithic monument known as 'Dolmenoid Cists', not found elsewhere in India.
 It was found at place called Ooragutta near Bandala village, Telangana.
- These "Dolmenoid cists" have capstones that determine the shape of the monument, unlike the usual square or rectangular forms.
 - The monuments are estimated to be around 1,000 BCE.
- It was suggested that these might be an earlier form of the more common square/rectangular megaliths seen in India and similar to European Passage Chambers.
- The team also discovered two new rock art sites at Damaratogu village.
- It includes the site, "Devarlabanda Mula" featuring animal depictions without humans or weapons/domestic animals.
 - This suggests the paintings might be from the Mesolithic Age (8000-3000 BCE).
