

India's First Private Space Vehicle Launchpad

Why in News?

Recently, Chennai-based space tech startup **Agnikul Cosmos inaugurated India's first private space vehicle launchpad** at the **Satish Dhawan Space Centre (SDSC) in Sriharikota.**

 It was executed in support of the <u>Indian Space Research Organisation (ISRO)</u> and IN-SPACe (Indian National Space Promotion and Authorization Center).

What is Agnikul's Launchpad Facility?

- About:
 - The facility has two parts: the Agnikul launchpad and the Agnikul mission control centre, which are four kilometres apart.
 - The launchpad has been designed to accommodate and support liquid stagecontrolled launches.
 - Agnikul Cosmos is planning to launch its Agnibaan rocket from this launchpad.
- Significance:
 - The launchpad is specifically built to address the need for ISRO's range operations team to monitor key flight safety parameters during launches.
 - Additionally, it has the ability to share data and other critical information with ISRO's Mission Control Center.

What is Agnibaan?

- Agnibaan is a two-stage launch vehicle that is capable of taking payloads of up to 100 kilograms to a low-earth orbit around 700 kilometres from the surface of the Earth.
- It will be powered by the company's 3D-printed Agnilet engines.
 - Agnilet is the world's first single-piece 3-D printed engine fully designed and manufactured in India and was successfully test-fired in early 2021, making Agnikul the first company in the country to test its engines at ISRO.
 - The Agnilet rocket is a "semi-cryogenic" engine that uses a mixture of liquid kerosene and supercold liquid oxygen to propel itself.
 - The engine is very complex and it functions at very high temperatures.
