

Food Supply Situation in India Ahead of Monsoon 2023

For Prelims: Southwest Monsoon, Food Inflation, Reserve Bank of India's monetary policy, consumer price index

For Mains: Impact of the monsoon season on India's food supply, Role of food supply in influencing inflation, Role of the Reserve Bank of India in monitoring and managing food supply-related risks

Why in News?

- As the monsoon season approaches, the food supply situation in India is being closely monitored. While there are currently no shortages, the spatial and temporal distribution of the monsoon rainfall plays a crucial role.
 - The <u>India Meteorological Department (IMD)</u> has forecasted just-about-normal rainfall during the <u>southwest monsoon season (June-September)</u>.
 - The implications of the monsoon on food supply will have a significant impact on the Reserve Bank of India's monetary policy.

What is the Current Status of the Food Supply?

Fine Balance in Wheat:

- Unseasonal rain and gusty winds in March and early April in 2023 affected standing wheat crops.
 - However, the yield losses were not as severe as initially feared.
- Government agencies have procured about 26.2 million tonnes of wheat during the current marketing season, ensuring sufficient stocks.
- Although wheat stocks appear low, the combined stocks of wheat and rice are **ample to meet the requirements** of the <u>public distribution system</u> and other **welfare schemes.**

Relief in Milk Supply:

- February-March 2023 witnessed unprecedented milk shortages, leading to soaring prices.
 - However, the situation has improved due to a comparatively mild summer and favorable pre-monsoon showers.
- Improved fodder supplies and high milk prices have triggered a supply response from farmers.

Tightrope Walk in Sugar:

- The closing stocks of sugar for the current sugar year (October-September 2023) are projected to be 5.7 million tonnes.
- This level of stocks can meet the domestic requirement for 2.5 months, including the peak festival season demand.
- The main concern is the monsoon's impact on sugarcane, which requires significant water during the growth phase.
- Sugar production for the next year depends on a normal monsoon.

Edible Oil and Pulses:

The supply position for edible oils seems comfortable due to viable imports covering

- domestic crop shortfalls.
- Global price crashes have made imported crude palm, soybean, and sunflower oil affordable.
- Ample stocks of <u>chickpeas</u> and imports of masoor red lentils contribute to a comfortable supply of pulses.

What is the Global Standing of India's Agricultural Sector in 2022-23?

- Milk Production:
 - India takes the lead as the world's largest producer of milk.
- Wheat Production:
 - Following China, India is the second-largest producer of wheat globally.
- Rice Production:
 - India is the second largest producer of rice, and at Number One in exports.
- Sugar Production:
 - India has emerged as the largest producer and consumer of sugar, while also being the **second-largest exporter**.
- Pulses Production:
 - India stands as the largest producer of pulses globally.

How Does Food Supply Impact RBI's Monetary Policy?

- Food Supply and Inflation:
 - Food supply impacts the prices of food items, which contributes to the consumer price index (CPI) used to measure inflation.
 - High food inflation directly affects headline inflation, which reflects overall price changes in the economy.
 - High food inflation can **reduce consumers' purchasing power,** leading to lower demand for other goods and services and affecting economic growth.
 - Industries relying on food inputs, such as beverages, may face increased production costs during high food inflation.
 - High food inflation can cause social and political unrest, particularly among the poor who spend a significant portion of their income on food.
- Food Supply and Monetary Policy:
 - Monetary policy involves regulating money and credit supply to achieve price stability, growth, and financial stability.
 - The <u>repo rate</u>, set by the central bank, influences interest rates, including lending rates, deposit rates, bond yields, and exchange rates.
 - Changes in the repo rate impact aggregate demand and supply, which influence inflation and growth.
 - The central bank considers various factors, such as inflation, growth, fiscal policy,
 global conditions, and financial stability, when adjusting the reportate.
 - Food supply is closely monitored by the central bank due to its implications for inflation and growth outcomes.
 - The central bank assesses the impact of food supply shocks on both <u>headline inflation and core inflation</u> (excluding volatile items like food and fuel).
 - Persistence and pass-through of food inflation to other sectors of the economy are also taken into account.
 - Government policies affecting food supply, such as <u>minimum support prices (MSPs)</u>, <u>procurement</u>, <u>buffer stocks</u>, and the <u>public distribution system (PDS)</u>, are considered by the central bank.
 - Based on its assessment, the central bank may adjust the repo rate to achieve its <u>inflation</u> target of 4% with a tolerance band of +/- 2%.

What are Government Initiatives Related to Food Security?

- National Food Security Mission.
- National Food Security Act (NFSA) 2013.
- Rashtriya Krishi Vikas Yojana (RKVY).
- Integrated Schemes on Oilseeds, Pulses, Palm oil and Maize (ISOPOM).
- eNAM Portal.
- Minimum Support Prices (MSP) for Agricultural products.
- Pradhan Mantri Fasal Bima Yoiana (PMFBY).
- National Horticulture Mission.

UPSC Civil Services Examination, Previous Year Question (PYQ)

Prelims

Q.1 With reference to the provisions made under the National Food Security Act, 2013, consider the following statements: (2018)

- 1. The families coming under the category of 'below poverty line (BPL)' only are eligible to receive subsidised food grains.
- 2. The eldest woman in a household, of age 18 years or above, shall be the head of the household for the purpose of issuance of a ration card.
- 3. Pregnant women and lactating mothers are entitled to a 'take-home ration' of 1600 calories per day during pregnancy and for six months thereafter.

Which of the statements given above is/are correct?

- (a) 1 and 2 only
- (b) 2 only
- (c) 1 and 3 only
- (d) 3 only

Ans: (b)

Mains

Q.1 In what way could replacement of price subsidy with Direct Benefit Transfer (DBT) change the scenario of subsidies in India? Discuss. **(2015)**
