

## Antibiogramoscope Device

A team of professors at **Anna University, Chennai** has developed a **device called Antibiogramoscope to deal with antibiotic resistance.**

- The research was supported by **University Grants Commission (UGC)** and **Department of Science and Technology (DST).**
- The team developed a liquid **Antibiotic Sensitivity Testing (AST) medium.** To this, a commercially available **fluorescent molecule** is added along with the **sample (body fluid).**
  - This is transferred to the antibiogramoscope's microwells which are coated with one type of antibiotic.
  - When bacteria grow in the medium, it **produces a compound called erucamide,** which binds to the **fluorescent molecule, turning OFF** its fluorescence.
  - This means **if we see fluorescence in some microwells,** those **antibiotics are effective in killing the bacteria.**
  - **No fluorescence** means the **bacteria is growing despite the antibiotic** which **highlights antibiotic resistance.**
- The **advantages** of Antibiogramoscope over traditional methods are:
  - It identifies **resistant strains of bacteria much quicker,** helping physicians choose the right drug, all at a **lower cost.**
  - The existing method uses a solid medium to grow bacteria, while this new method **uses liquid medium giving superior results.**
  - The system is **automated,** needing no human intervention once the samples and medium are loaded.
- Antibiogramoscope has **cleared validation tests** at **National Accreditation Board for Testing and Calibration Laboratories (NABL)** accredited microbiological lab.

### National Accreditation Board for Testing and Calibration Laboratories (NABL)

- NABL is a **Constituent Board** of **Quality Council of India.**
  - NABL has been established with the objective of providing Government, Industry Associations and Industry in general with a scheme of Conformity Assessment Body's accreditation which involves third-party assessment of the technical competence of testing including medical and calibration laboratories, proficiency testing providers and reference material producers.
  - **Quality Council of India (QCI)** as a **non-profit autonomous society** registered under **Societies Registration Act, 1860.**
  - The aim of QCI is to establish an accreditation structure in the country and to spread quality movement in India by undertaking a National Quality Campaign.
- 
- It can be noted that in a **separate development** which is also significant, the [scientists at the Centre for Cellular & Molecular Biology \(CCMB\) have come up with a way to inhibit the multiplication of bacteria](#) **even before the cell wall begins to grow.**
