Recently, a study showed that the ingestion of **psilocybin**, the hallucinogenic compound present in **magic mushrooms**, results in a temporary reset of extensive **neuron networks in the brain responsible for regulating an individual's perception of time and self.**

- Mushrooms are fungi that typically have a stem, a cap, and gills.
- They are classified as fungi because they lack chlorophyll and cannot produce their food through photosynthesis.
 - The fungi constitute a unique kingdom of heterotrophic organisms.
 - They are a diverse group of eukaryotic microorganisms or macroscopic organisms that belong to their biological kingdom, distinct from plants, animals, and bacteria.
 - Except for unicellular yeasts, fungi are filamentous.
 - Fungi have beneficial applications such as **yeast** in baking and brewing, antibiotic production like penicillin, and culinary uses.
 - Fungi prefer to grow in warm and humid places.
 - Reproduction in fungi can take place by vegetative means (fragmentation, fission and budding), asexual reproduction (by spores) and sexual reproduction.
 - Fungi play a **crucial role** in preserving the equilibrium of our ecosystem through several key functions like **Decomposition**, **Symbiosis**, and **Soil enrichment**.
