

Japanese Encephalitis Outbreak in Madhya Pradesh

Why in News?

According to the **Union Ministry of Health and Family Welfare (MoHFW)**, eight people have died after **Japanese Encephalitis (JE)** infection in Madhya Pradesh since 2019.

Key Points

- Due to the rise in JE cases in Madhya Pradesh the situation is being closely observed as it poses a direct risk to public well-being.
 - Earlier in 2024, Japanese Encephalitis was identified in 29 districts of Madhya Pradesh.

Japanese Encephalitis

- About:
 - Japanese Encephalitis (JE) is a viral infection that can cause inflammation in the brain.
 - It is caused by a flavivirus that belongs to the same genus as dengue, yellow fever and West Nile viruses.
 - Japanese encephalitis virus (JEV) is also a major cause of <u>Acute Encephalitis Syndrome</u>
 (AES) in India.
- Transmission:
 - The disease is transmitted to humans through bites from infected mosquitoes of the <u>Culex species</u>.
 - These mosquitoes breed mainly in rice fields and large water bodies rich in aquatic vegetation.
- Treatment:
 - There is no antiviral treatment for patients with JE.
 - Treatment, available, is supportive to relieve symptoms and stabilise the patient.
- Prevention:
 - Safe and effective JE vaccines are available to prevent the disease.
 - JE vaccination is also included under the Universal Immunisation Program of the Government of India.
