

National Space Day 2024

[Source: TH](#)

Why in News?

Recently, India celebrated its **first National Space Day** on 23rd August 2024. It is celebrated to mark the **safe and soft landing of Vikram Lander** of [Chandrayaan-3 mission](#), on the lunar surface on **23rd August 2023**.

- Additionally, the recent findings based on **Chandrayaan-3**, represent the first analysis of the Moon's southern topsoil composition and support the hypothesis of the sea of molten material on the lunar surface.

Why is National Space Day Celebrated?

▪ About:

- **National Space Day, celebrated on 23rd August**, commemorates India's space achievements, particularly Chandrayaan-3's success.
- With the launch of **Chandrayaan-3** in 2023, India became the **fourth nation to successfully land** on the Moon and the **first to reach its southern polar region**.
- It highlights India's space exploration capabilities and aims to inspire future generations to pursue careers in [science, technology, engineering, and mathematics \(STEM\)](#), contributing to India's ongoing space endeavours.

▪ Theme for 2024:

- The theme for **National Space Day 2024** is '**Touching Lives while Touching the Moon: India's Space Saga**'.

What are the Recent Findings of Chandrayaan-3?

▪ Key Findings:

- The terrain around **Chandrayaan 3's** landing sight is fairly uniform.
- A **sea of hot, molten rock or magma** once existed under the lunar surface.
- The **Moon's crust was formed layer by layer**, which supports the **lunar magma ocean (LMO) hypothesis**.
- The **topsoil around the lunar south pole** has a greater-than-expected sprinkling of minerals which compose the lower layers of the lunar crust.

▪ LMO Hypothesis and Lunar Crust Formation:

- The **Moon is believed to have formed from a giant [asteroid](#) impact** with Earth about 4.5 billion years ago, creating a **molten surface** that eventually cooled.
- In this process, **heavier minerals** like **olivine and pyroxene** sank to the lower crust and upper mantle, while **lighter minerals like calcium** and sodium-based compounds **floated to form the upper crust**.

CHANDRAYAAN 3

India's 3rd lunar mission; a successful attempt at achieving a soft landing on lunar south

BRIEF HISTORY

Lunar Mission	Aim	Launch Vehicle	Success
<ul style="list-style-type: none"> Chandrayaan 1 (2008) 	Create a 3D atlas of moon & Mineralogical mapping	PSLV – C11	Detection of water and hydroxyl on lunar surface
<ul style="list-style-type: none"> Chandrayaan 2 (2019) 	Exploring lunar south pole	GSLV MKIII-M1	Lander and rover crashed but orbiter successfully collected data

COMPONENTS

- Lander - Vikram; Rover - Pragyan (same as Chandrayaan 2)
 - ▶ Both designed to last for 14 days; not supposed to come back to the earth
- Spectro-polarimetry of Habitable Planet Earth (SHAPE)
 - ▶ An experimental payload in propulsion module
 - ▶ Study spectro-polarimetric signatures of Earth (near-infrared wavelength range)

ASPECTS TO STUDY

- Lunar quakes
- Thermal properties of lunar surface
- Changes in plasma near the surface
- Accurately measuring distance b/w Earth and the moon

MISSION LIFE

- 1 lunar day (~14 Earth days)

LAUNCH VEHICLE

- LVM3 - M4

India became the 1st country to successfully land on Lunar south pole and 4th to achieve soft-landing on Lunar surface (after US, Russia and China)

Why Chandrayaan 3 Succeeded?

- A "failure-based design", unlike the "success-based design" of Chandrayaan-2
 - ▶ Even if all the sensors failed and engines stopped, Vikram was sure to make the landing
 - ▶ Provision of multiple attempts for landing if attempt 1 failed
- Developed accordingly to rule out the scenario of crash landing
 - ▶ Expanded landing area for more flexibility to land safely
 - ▶ Equipped with more fuel to enable longer-distance travel

Importance of Lunar South Pole

- Vastly different, more challenging terrain compared to lunar equatorial region
- Potential repositories of valuable information about early Solar System
- Impact future deep space exploration significantly
- Water may be concentrated in the moon's southern hemisphere

What are the Highlights of Indian Space Missions in 2003-24?

- **Aditya-L1 Mission:**
 - **Aditya-L1** is the first space based observatory class Indian solar mission to study the Sun from the first Earth-Sun Lagrange point, **L1**.
- **Gaganyaan TV-D1 Test:**
 - ISRO conducted its **Flight Test Vehicle Abort Mission-1 (TV-D1)**, using a modified **L-40 Vikas engine** for the **Gaganyaan** human spaceflight mission.
 - The test demonstrated the **Crew Escape System (CES)** capabilities, including **separation from the test vehicle, crew module safety, and**

deceleration before splashdown in the Bay of Bengal. The module was recovered by the Indian Navy vessel [INS Shakthi](#).

▪ **XPoSat Launch:**

- On 1st January 2024, ISRO launched the [X-ray Polarimeter Satellite \(XPoSat\)](#), aimed at studying **radiation polarisation in space**.
- The satellite is the second space-based observatory of its kind, following [NASA's Imaging X-ray Polarimetry Explorer \(IPEX\)](#) launched in 2021.

▪ **RLV-TD Experiments:**

- ISRO conducted two landing experiments using a downscaled version of the [Reusable Launch Vehicle, Pushpak](#), in March and June 2024, at its **Aeronautical Testing Range** Challakere, Karnataka.
- These tests simulated space landing conditions, with Pushpak being dropped from a [Chinook helicopter](#) to assess landing performance.

▪ **SSLV Development:**

- In August 2024, ISRO launched the third and final development flight of the [Small Satellite Launch Vehicle \(SSLV\)](#), successfully placing the **EOS-08 and SR-0 Demosat satellites** in orbit.
- With two consecutive successful test flights, ISRO concluded the SSLV's development and transferred it to industry.

▪ **Private Space Missions:**

- In March 2024, [Agnikul Cosmos](#) successfully launched its **SoRTeD-01 vehicle**, marking the first launch of a vehicle powered by a [semi-cryogenic engine](#) as its first stage from Indian soil.
- **Skyroot Aerospace** is progressing towards its [Vikram 1 launch vehicle](#).
- **Dhruva Space and Bellatrix Aerospace** conducted experiments on the fourth stage of the [PSLV-C58](#) mission in January 2024, utilising the stage as an orbiting platform for their payloads.

UPSC Civil Services Examination, Previous Year Question (PYQ)

Prelims:

Q. Consider the following statements: (2016)

1. The Mangalyaan launched by ISRO
2. is also called the Mars Orbiter Mission
3. made India the second country to have a spacecraft orbit the Mars after USA
4. made India the only country to be successful in making its spacecraft orbit the Mars in its very first attempt

Which of the statements given above is/are correct?

- (a) 1 only
- (b) 2 and 3 only
- (c) 1 and 3 only
- (d) 1, 2 and 3

Ans: (c)

Mains:

Q. Discuss India's achievements in the field of Space Science and Technology. How the application of this technology has helped India in its socio-economic development? (2016)
