Californium

Source: IE

Recently, police in **Bihar's Gopalganj** seized **50 grams** of the **highly** <u>radioactive metal</u> **Californium**, estimated to be worth **Rs 850 crore**.

- Californium is a silvery-white metal that tarnishes gradually when exposed to air at room temperature.
- It is so soft and malleable that it can be sliced with a razor blade and its spectral lines have been detected in supernova.
- Chemical symbol of Californium is Cf and the atomic number is 98.
- Created in 1950 at Berkeley, it is a powerful neutron emitter.
- It is utilized in portable metal detectors to identify gold and silver ores, locate water and oil layers in wells, and detect metal fatigue and stress in airplanes.
- Neutrons from Californium (Cf-252) are utilised to serve the treatment of brain and <u>cervical</u> <u>cancers</u> when radiation therapy proves futile.
- Highly radioactive and extremely costly, Californium is priced at approximately Rs 17 crore per gram in the international market (one of the most expensive substances in the world).
