

Project Strawberry

[Source: IE](#)

[OpenAI](#) is expected to release its most advanced **AI model**, codenamed **Project Strawberry**, between September and November 2024.

- This model might be integrated into the upcoming [ChatGPT-5](#), the new version of OpenAI's chatbot.
- **Project Strawberry** (Previously Project Q* (Q-star)) is aimed at creating [Artificial General Intelligence \(AGI\)](#) i.e., **AI with cognitive abilities** similar to the human brain.
- **Features and Capabilities:**
 - It has shown capabilities in solving **complex puzzles** and performing advanced cognitive tasks.
 - It is reported to **handle mathematical problems** more effectively than its predecessors.
 - It is expected to have the capability to perform **autonomous research online**.
 - It will play a crucial role in generating **high-quality synthetic data** for future models, particularly [Project Orion](#).
 - Project Orion is being designed to outperform GPT-4. It could use a combination of Project Strawberry and high-quality synthetic data that would likely reduce errors and hallucinations compared to its predecessors and other AI models.
