

## World AIDS Day 2023

#### **Source: TH**

#### Why in News?

Every year on 1st December, <u>World AIDS Day</u> is commemorated globally to raise awareness about Human Immunodeficiency Virus (HIV)/Acquired Immuno Deficiency Syndrome (AIDS) and honor those who have succumbed to it.

- World Aids Day was first observed in 1988 when the World Health Organisation (WHO) recognised the day.
- The theme for World AIDS Day 2023 is 'Let communities lead.'

#### What is HIV/AIDS Disease?

#### About:

- Human immunodeficiency virus (HIV) is an infection that attacks the body's immune system.
  - AIDS is the late stage of HIV infection that occurs when the body's immune system is badly damaged because of the virus.
- HIV attacks CD4, a type of White Blood Cell (T cells) in the body's immune system.
  - T cells are those cells that move around the body detecting anomalies and infections in cells.
- After entering the body, HIV multiplies itself and destroys CD4 cells, thus severely
  damaging the human immune system. Once this virus enters the body, it can never be
  removed.
- The CD4 count of a person infected with HIV reduces significantly. In a healthy body, CD4 count is between 500- 1600, but in an infected body, it can go as low as 200.

#### Transmission:

 HIV can spread through multiple sources, by coming in direct contact with certain body fluids from a person infected with HIV, who has a detectable viral load. It can be blood, semen, rectal fluid, vaginal fluid or breast milk.

#### Symptoms:

 Once HIV converts into AIDS then it may present in initial symptoms like unexplained fatigue, fever, sores around genitals or neck, pneumonia etc.

#### Prevalence of HIV AIDS:

- It is estimated that globally 39 million persons are living with HIV (Human Immunodeficiency Virus).
- In India the figure is 2.4 million.
- $\circ\,$  There were 1.3 million new HIV infections in 2022 globally and 63,000 in India.
  - In 2022, 650,000 persons died due to these conditions globally. In India, AIDS caused 42,000 deaths. Many of these **opportunistic infections are preventable and treatable.**

#### What are the India's Efforts to Prevent HIV?

HIV and AIDS (Prevention and Control) Act, 2017: According to this act, the central and state

governments shall take measures to prevent the spread of HIV or AIDS.

#### Access to ART:

• India has made <u>Antiretroviral Therapy (ART)</u> affordable and accessible to over 90 per cent of people living with HIV in the world.

#### Memorandum of Understanding (MoU):

 The Ministry of Health and Family Welfare signed a MoU with the Ministry of Social Justice and Empowerment in 2019 for enhanced HIV/AIDS outreach and to reduce the incidence of social stigma and discrimination against victims of drug abuse and Children and People Living with HIV/AIDS.

#### Project Sunrise:

 <u>Project Sunrise</u> was launched by the Ministry of Health and Family Welfare in 2016, to tackle the rising HIV prevalence in north-eastern states in India, especially among people injecting drugs.

#### Pre-Exposure Prophylaxis (PrEP):

 Offering PrEP medications to individuals at high risk of contracting HIV can significantly reduce the chances of infection when taken consistently.

### **UPSC Civil Services Examination, Previous Year Questions (PYQs)**

# Q. Which of the following diseases can be transmitted from one person to another through tattooing? (2013)

- 1. Chikungunya
- 2. Hepatitis B
- 3. HIV-AIDS

#### Select the correct answer using the codes given below:

- (a) 1 only
- **(b)** 2 and 3 only
- (c) 1 and 3 only
- (d) 1, 2 and 3

Ans: (b)
