

Rising Dengue Cases in Jammu & Kashmir | Jammu & Kashmir | 24 Sep 2024

Why in News?

The number of **dengue cases** has risen in **Jammu & Kashmir** and is currently experiencing a concerning increase in **dengue cases**, with officials confirming **934 cases** so far this year.

Key Points

- <u>Dengue</u> is a mosquito-borne tropical disease caused by the dengue virus (Genus Flavivirus), transmitted by several species of female mosquito within the genus Aedes, principally <u>Aedes aegypti</u>.
- The region has reported a steady rise in infections over the past week, with daily counts fluctuating between 19 to 83 cases.
- This upsurge in dengue cases comes as health authorities ramp up their efforts to manage the outbreak and educate the public on preventive measures.
- Common symptoms of dengue include:
 - Fever
 - Headache
 - Pain behind the eyes
 - Muscle, joint, or bone pain
 - Rash
 - Nausea and vomiting
- Preventive Measures:
 - Officials are urging people to take preventive steps to stop the spread of the disease because no dengue vaccine is available till now.
 - The Authority emphasized the importance of eliminating mosquito breeding sites, particularly stagnant water, and advised individuals to take personal precautions to avoid mosquito bites.
 - Using mosquito repellents and wearing long-sleeved clothing.
 - Using mosquito nets during daytime sleep and treating them with insect repellents.
 - Staying vigilant and monitoring for symptoms
