

## Rising Dengue Cases in Jammu & Kashmir | Jammu & Kashmir | 24 Sep 2024

## Why in News?

The number of dengue cases has risen in Jammu & Kashmir and is currently experiencing a concerning increase in **dengue cases**, with officials confirming **934 cases** so far this year.

## **Key Points**

- Dengue is a mosquito-borne tropical disease caused by the dengue virus (Genus) Flavivirus), transmitted by several species of female mosquito within the genus Aedes, principally Aedes aegypti.
- The region has reported a steady rise in infections over the past week, with daily counts fluctuating between 19 to 83 cases.
- This upsurge in **dengue cases** comes as health authorities ramp up their efforts to manage the The Visio outbreak and educate the public on preventive measures.
- Common symptoms of dengue include:
  - Fever
  - Headache
  - Pain behind the eyes
  - Muscle, joint, or bone pain
  - Rash
  - Nausea and vomiting
- Preventive Measures:
  - Officials are urging people to take preventive steps to stop the spread of the disease because no dengue vaccine is available till now.
  - The Authority emphasized the importance of eliminating mosquito breeding sites, particularly stagnant water, and advised individuals to take personal precautions to avoid mosquito bites.
  - Using mosquito repellents and wearing long-sleeved clothing.
  - Using mosquito nets during daytime sleep and treating them with insect repellents.
  - Staying vigilant and monitoring for symptoms
