

Global Unemployment Rate to Marginally Decrease in 2024

Source: BS

The <u>International Labour Organisation (ILO)</u> has revised its **global** <u>unemployment</u> **forecast** for 2024, projecting a **slight decrease to 4.9%** from the previously estimated 5.2%, while highlighting the persistent inequalities in labor markets worldwide.

- The revision is mainly due to **lower-than-expected unemployment rates in China, India,** and high-income countries reported so far this year.
- The downward trend in unemployment is expected to flatten in 2025, with the rate remaining at 4.9%.
- Despite the overall improvement, inequalities in labor markets persist, with women in low-income countries particularly affected.
- The report highlights that 183 million people are considered unemployed, while the number of those without a job but wanting to work stands at 402 million.
- The ILO is the <u>United Nations</u> agency for promoting social and economic justice through international labour standards.
 - It was created in 1919, as part of the <u>Treaty of Versailles</u> that ended <u>World War I</u> and became a specialized agency of the United Nations in 1946.
 - Based in Geneva, Switzerland, it has 187 member states(India is a founder member) and operates as a tripartite organization, bringing together governments, employers, and workers' representatives.
 - The ILO is also a member of the United Nations Development Group, aiming to achieve the <u>Sustainable Development Goals</u>.
