

# **Important Terminology in Al**

#### Source: LM

Recently the few terms related to the field of **artificial intelligence (AI)** and computer science, are in the news in the context of emerging issues in the field of Information technology.

# Data Dredging:

 It is a statistical manipulation method to find patterns in data, seemingly appearing to be significant but having no underlying effect in reality – resulting in misleading conclusions.

#### Air Gap:

- In <u>cyber security</u>, air gap refers to a **network security** measure of isolating computers or networks from **external connections**, including the internet.
- Air gaps are typically employed in high-risk scenarios, like classified defence systems, to safeguard data from damage, unauthorised access, and manipulation in cases of system failure or intrusion.

## • Mixture of Experts:

- It is a **machine learning approach** to training by splitting tasks into sub-problems and assigning 'expert' models to handle each of them.
- Each expert model predicts the sub-tasks which are then combined to generate the final output.

### • OTA Update:

- Over-the-air (OTA) updates are the **delivery of new software** or firmware features and updates via an internet connection.
- OTA updates provide enhancements to the operating system, system apps on read-only partitions, and time zone rules wirelessly, enabling automatic or manual installation.
