

## Mercury Pollution

**For Prelims:** Minamata Convention on Mercury, Mercury and its characteristics.

**For Mains:** Concerns related to Mercury Pollution, Environmental Pollution & Degradation.

### Why in News?

Recently, Indonesia has **introduced a global declaration** that calls on parties to the **Minamata Convention on Mercury** to tackle illegal trade of mercury.

- The declaration was read in Nusa Dua, Bali, where **Indonesia is hosting the fourth Conference of Parties (COP4)** to the Minamata Convention on Mercury.
- The conference is being held from 21<sup>st</sup> to 25<sup>th</sup> March 2022.

### What are the Objectives of the Declaration?

The non-binding declaration calls upon parties to:

- **Develop practical tools and notification** and information-sharing systems for monitoring and managing trade in mercury.
- **Exchange experiences and practices relating to combating illegal trade** in mercury, including reducing the use of mercury in artisanal and small-scale gold mining.
- **Share examples of national legislation and data** and information related to such trade.

### What is the Minamata Convention on Mercury?

- The Minamata Convention on Mercury is a **global treaty to protect human health and the environment** from the adverse effects of mercury and its compounds.
- It was **agreed at the fifth session of the Intergovernmental Negotiating Committee in Geneva, Switzerland 2013**.
- Controlling the **anthropogenic releases of mercury throughout its lifecycle** is one of the key obligations under the Convention.
- The **Convention also addresses interim storage of mercury** and its disposal once it becomes waste, sites contaminated by mercury as well as health issues.
- The Convention **covers all aspects of the life cycle of mercury, controlling and reducing mercury** across a range of products, processes and industries. This includes controls on:
  - mercury mining
  - the manufacture and trade of mercury and products containing mercury
  - disposal of mercury waste
  - emissions of mercury from industrial facilities.
- Countries that have **ratified the Convention are bound by international law** to put these controls in place.
  - **India has ratified the Convention.**

## What do we know about Mercury?

### ▪ About:

- Mercury is a **naturally occurring element** that is found in air, water and soil.
- Exposure to mercury – **even small amounts – may cause serious health problems**, and is a threat to the development of the child in utero and early in life.
- Mercury may have **toxic effects on the nervous, digestive and immune systems**, and on lungs, kidneys, skin and eyes.
- Mercury is considered by the [World Health Organisation \(WHO\)](#) as one of the **top ten chemicals or groups of chemicals** of major public health concern.
- People are mainly exposed to **methylmercury, (an organic compound)** when they eat fish and shellfish and are more vulnerable to Minamata disease.
  - **Minamata Disease:** A disorder **caused by methylmercury poisoning** that was first described in the inhabitants of Minamata Bay, Japan and resulted from their eating fish contaminated with mercury industrial waste.
    - The **disease is characterized by peripheral sensory loss**, tremors, and both hearing and visual loss.
  - Methylmercury is **very different from ethylmercury**. Ethylmercury is used as a preservative in some vaccines and does not pose a health risk.

### ▪ Types of Sources:

- **Natural sources:** [Volcanic eruptions](#) and emissions from the ocean.
- **Anthropogenic (human-caused) emissions:** It includes mercury that is **released from fuels or raw materials**, or from uses in products or industrial processes.
  - Globally, **Artisanal and Small-Scale Gold Mining (ASGM)**: It is the largest source of anthropogenic mercury emissions (37.7%), followed by stationary combustion of coal (21%).
  - Other **large sources of emissions** are non-ferrous metals production (15%) and cement production (11%).
  - Globally, **10-20 million people work in the ASGM sector** and many of them use mercury on a daily basis.

### UPSC Civil Services Examination, Previous Year Questions (PYQs)

**Q. Indiscriminate disposal of used fluorescent electric lamps causes mercury pollution in the environment. Why is mercury used in the manufacture of these lamps? (2010)**

- (a) A mercury coating on the inside of the lamp makes the light bright white
- (b) When the lamp is switched on, the mercury in the lamp causes the emission of ultra-violet radiations
- (c) When the lamp is switched on, it is the mercury which converts the ultra-violet energy into visible light
- (d) None of the statement given above is correct about the use of mercury in the manufacture of fluorescent lamps

**Ans: (b)**
