

Swine Flu Cases in Madhya Pradesh

Why in News?

Recently, Eleven cases of Swine Flu have been detected in Jabalpur district of Madhya Pradesh.

Key Points

- The **infected persons had complained** of **cold**, **cough and fever** before testing positive for swine flu. They are residents of different areas in the district.
- To curb the spread of the disease, health department teams are conducting tests in various areas.

Swine Flu

- It is caused by the <u>swine flu virus</u>, the <u>H1N1</u>.
- It is an infection of the respiratory tract characterized by the usual symptoms of flu like cough, nasal secretions, fever, loss of appetite, fatigue and headache.
- It is called swine flu because in the past it was known to occur in people who had been in the vicinity of pigs.
- The virus is **transmitted by short-distance airborne transmission**, particularly in crowded enclosed spaces. **Hand contamination** and **direct contact** are other possible sources of transmission.
