

## **Mapping Tissues**

Recently, Department of Biotechnology (DBT) launched 'MANAV: Human Atlas Initiative', a project for mapping every tissue of the human body to help better understand the roles of tissues and cells linked to various diseases.

## **Purpose of the Programme**

The programme will seek to provide:

- Better biological insights through physiological and molecular mapping,
- Develop disease models through predictive computing
- Allow for a holistic analysis and finally drug discovery.

The aim of the project is to understand and capture human physiology in two stages – normal stage and disease stage.

## Why it Matters

- The collated data can be useful for future researchers and clinicians and drug developers, who finally handle human bodies in disease conditions.
- Such a database will come in handy in tracing causes of a disease, understanding specific pathways and ultimately decoding how the body's disease stage is linked to tissues and cells.
