

Earthquake in Uttarkashi

Why in News?

According to the <u>National Centre for Seismology (NCS)</u> data, an <u>earthquake</u> of **2.6 magnitude** on the **Richter scale** hit Uttarkashi district of Uttarakhand.

Key Points

- The epicentre of the earthquake was located at Latitude 31.00 and Longitude 79.31, at a depth of 5 kilometres.
- National Center for Seismology (under the Ministry of Earth Sciences) is the nodal agency
 of the Government of India for monitoring of earthquake activity in the country.
- Currently, India has only 115 earthquake observatories.
 - The most important aspect of the Earthquake Observatory is to be able to accurately predict the time of the earthquake.

EARTHQUAKE **ABOUT**

Shaking of the earth; caused due to release of energy, generating seismic waves in all directions

EARTHQUAKE WAVES

- Body Waves: Move in all directions travelling through the body of the earth
 - OP Waves: Move faster, First to arrive at surface, Similar to sound waves, Travel through gaseous, liquid and solid materials
 - S Waves: Arrive at surface with some time lag, Travel only through solid materials
- Surface Waves: Last to report on seismographs, More destructive, Cause displacement of rocks
 - Love Waves: Same motion as S-waves (horizontal) without vertical displacement, Sideways motion perpendicular to the direction of propagation, Faster than Rayleigh waves
 - Rayleigh Waves: Cause the ground to shake in an elliptical pattern, Spread out the most of all seismic waves, Move vertically and horizontally in a vertical plane

- Release of energy along a Fault/Fault Zones (break in the crustal rocks)
- Movement of tectonic plates (most common)
- Volcanic eruption (stress changes in rockinjection/withdrawal of magma)
- Human activities (mining, explosion of chemical/nuclear devices etc.)

MEASURING EARTHQUAKE

CAUSES OF EARTHQUAKES

- Seismometers Measures seismic waves
- Richter Scale Measures magnitude (energy released; range: 0-10)
- Mercalli Measures intensity (visible damage; range: 1-12)

DISTRIBUTION

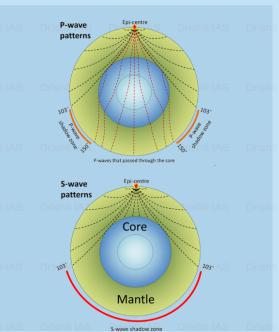

- Circum-Pacific Belt 81% of earthquakes
- Alpide Earthquake Belt 17% of the largest earthquakes
- Mid-Atlantic Ridge Mostly submerged underwater

HYPOCENTER

Location where the earthquake starts (below earth's surface)

Location right above the Hypocenter (on the earth's surface)

EARTHQUAKE IN INDIA

- India is one of the highly earthquake affected countries due to the presence of technically active mountains - the Himalayas.
- India has been divided into 4 seismic zones (II, III, IV, and V)
