

Grasslands of the World

GRASSLAND OF THE WORLD

FACTS

- There are **two main kinds of grasslands**: tropical and temperate. Examples of **temperate grasslands** include Eurasian **steppes**, North American **prairies**, and Argentine **pampas**. **Tropical grasslands** include the hot savannas of sub-Saharan Africa and northern Australia.
- Tropical grasslands have dry and wet seasons that remain warm all the time (**temperature: 25°C to 30°C**). Temperate grasslands have cold winters and warm summers with some rain (**below 0°C in winters to 32°C in summers**).
- **Wildfires are vital for grasslands' existence**; they prevent woody plants from spreading and enable the grass to re-grow thicker and healthier.
