

Death of Elephants due to Kodo Millet Poisoning

Why in News?

Recently, a group of <u>elephants</u> in Madhya Pradesh's <u>Bandhavgarh Tiger Reserve</u> died due to suspected <u>kodo millet</u> poisoning, a grain that can become toxic under certain environmental conditions.

Key Points

About Kodo Millet:

- Kodo millet known as Paspalum scrobiculatum is a resilient, drought-tolerant crop with high yield and excellent storage, often serving as a staple for tribal and economically disadvantaged communities in India.
- India, particularly Madhya Pradesh, is one of its largest producers.
- Apart from MP, the millet is cultivated in Gujarat, Karnataka, Chhattisgarh, and parts
 of Tamil Nadu.

Kodo Millet's Toxicity:

- Millets, especially kodo millet, are prone to <u>fungal infections</u> like **ergot**, which can produce toxins that harm grain yield and cause poisoning if consumed. These infections are particularly damaging in humid conditions.
- Toxicity arises when environmental conditions foster fungal growth, producing the mycotoxin cyclopiazonic acid (CPA).
- CPA affects the nervous and <u>cardiovascular systems</u>, causing symptoms like **vomiting**, tremors, and cold extremities in animals.

Historical Cases of Kodo Poisoning:

- Documented cases date back to 1922, with both humans and animals affected by mycotoxin-laden millet.
- Kodo millet poisoning has led to periodic wildlife fatalities, including an elephant death in 2022.

Detection and Prevention:

- Detection requires chemical analysis, such as chromatography or rapid methods like ELISA.
- To prevent contamination, experts advise proper storage and biocontrol methods, which involve beneficial organisms that limit fungal spread.

Millet

About:

- It is a collective term referring to a number of small-seeded annual grasses that are cultivated as grain crops, primarily on marginal lands in dry areas in temperate, <u>subtropical</u> <u>and tropical regions.</u>
- Some of the common millets available in India are Ragi (Finger millet), Jowar (Sorghum),
 Sama (Little millet), Bajra (Pearl millet), and Variga (Proso millet).
 - The earliest evidence for these grains has been found in <u>Indus civilization</u> and was one of the first plants domesticated for food.
- It is grown in about 131 countries and is the traditional food for around 60 crore people in

Asia & Africa.

- India is the largest producer of millet in the world.
 - It accounts for 20% of global production and 80% of Asia's production.

Global Distribution:

- India, Nigeria and China are the largest producers of millets in the world, accounting for more than 55% of the global production.
- For many years, India was a major producer of millets. However, in recent years, millet production has increased dramatically in Africa.
