

China's Renewed Support for Paris Agreement

Why in News

Recently, China has renewed its support for the [Paris Agreement](#) at the [United Nations](#) (UN) **General Assembly**, while calling for a 'green focus' as the world recovers from the [Covid-19](#) crisis.

Key Points

- China is the **world's biggest polluter** and **accounts for a quarter of the planet's [greenhouse gas](#) (GHG) emissions.**
- It now aims to reach **carbon-dioxide emissions peak before 2030** and **achieve carbon neutrality before 2060.**
 - The 2060 objective is **still a decade later than the date set by other small states as well as European powers** but it has been appreciated by experts as a significant step to inject momentum into the Paris accord.
- In addition to its embrace of global emissions-busting deals, China already feeds **nearly 15% of its energy demands with non-fossil fuels** and its **installation of [renewable energy](#) stands at 30% of the world total.**
- However, global experts have highlighted that there are **massive investments continuing within China and overseas in coal and other fossil fuels.**
 - China currently has **135 gigawatts of coal-power capacity either permitted or under construction**, according to **Global Energy Monitor**, a San Francisco-based environmental group.
 - This equates to about **half the total coal-power capacity in the USA** which is the **second-largest polluter after China.**
- **Against the USA:**
 - China **highlighted USA's demand for plastics and export of waste** and **criticised it for "obstructing" the global fight** against emissions.
 - Earlier, the **[USA had pulled out of the Paris agreement](#)**, calling it unfair and **blamed China for the stalled momentum** on tackling global emissions.
 - This move has opened a **new divergence in [US-China relations](#) which are already troubled** over issues like [trade](#), technology, defence and human rights.

Paris Agreement

- Paris Agreement (also known as the **Conference of Parties 21** or **COP 21**) is a landmark environmental accord that was **adopted in 2015 to address climate change and its negative impacts.**
 - It replaced the [Kyoto Protocol](#) which was an earlier agreement to deal with climate change.
- **Aims:** To reduce global GHG emissions in an effort to **limit the global temperature increase in this century to well below 2°C above pre-industrial levels**, while pursuing means to **limit**

the increase to 1.5°C by 2100.

▪ **It includes:**

- **Addressing the financial losses vulnerable countries face** from climate impacts such as extreme weather.
- **Raising money to help developing countries** adapt to climate change and transition to clean energy.
- This part of the deal has been made **non-legally binding on developed countries.**
- Before the conference started, **more than 180 countries had submitted pledges to cut their carbon emissions (Intended Nationally Determined Contributions or INDCs).**
 - The INDCs were **recognised under the agreement, but are not legally binding.**
 - **India also reaffirmed its INDCs commitments** to meeting the goals under the Agreement in order to **combat the climate change.**
