

## India's Only Ape Species: The Hoolock Gibbon

[Source: TH](#)

### Why in News?

The conservation status of India's sole ape species, the [hoolock gibbon](#), has become a **pressing global concern**.

- The **Global Gibbon Network (GGN)** recently convened its inaugural meeting in **Haikou, China's Hainan province**, shedding light on the critical situation faced by these primates.

**Note: Global Gibbon Network** was initiated at the **International Gibbon Day 2020** event, representatives from 20 gibbon conservation organizations came together for the first time to discuss gibbon conservation.

### What are the Key Facts about Hoolock Gibbon?

//

#### ▪ **About:**

- Gibbons, known as the **smallest and fastest of all apes**, inhabit tropical and subtropical forests in Southeast Asia.
  - They have **high intelligence, distinct personalities**, and strong family bonds similar to other apes.
- They represent **one of the 20 gibbon species found worldwide**.

#### ▪ **Population and Habitat:**

- The current population of hoolock gibbons is estimated to be around **12,000** individuals.
- They are found in forested areas of **Northeast India, Bangladesh, Myanmar and Southern China**.

#### ▪ **Gibbon Species in India:**

- **Two distinct hoolock gibbon species** are found in India's northeastern region: the **eastern hoolock gibbon** (*Hoolock leuconedys*) and the **western hoolock gibbon** (*Hoolock hoolock*).
- A recent study by the **Centre for Cellular and Molecular Biology (CCMB)** in Hyderabad analyzed the genetics of these gibbons.
  - The study revealed that there is actually **only one species of gibbon in India**, debunking the previous belief of separate eastern and western species based on coat color.
  - The genetic analysis showed that the populations previously thought to be **eastern and western hoolock gibbons diverged approximately 1.48 million years ago**.
  - The study also estimated that **gibbons diverged from a common ancestor around 8.38 million years ago**.

#### ▪ **Threats:**

- All 20 gibbon species, including hoolock gibbons, are at a **high risk of extinction** due to conservation challenges.
- Gibbon populations and their habitats have significantly declined over the past

century, **leaving small populations restricted to tropical rainforests.**

- In India, the primary threat to hoolock gibbons is the **loss of their natural habitat** caused by deforestation for infrastructure projects.

▪ **Conservation Status:**

- **International Union for Conservation of Nature's Red List:**

- Western Hoolock Gibbon: **Endangered**
- Eastern Hoolock Gibbon: **Vulnerable.**

- Also, both the species are listed on **Schedule 1 of the Indian (Wildlife) Protection Act 1972.**

## UPSC Civil Services Examination, Previous Year Questions (PYQs)

**Q. Consider the following pairs: (2010)**

	<b>Protected area</b>	<b>Well-known for</b>
1.	Bhiterkanika, Orissa	Salt Water Crocodile
2.	Desert National Park, Rajasthan	Great Indian Bustard
3.	Eravikulam, Kerala	Hoolock Gibbon

**Which of the pairs given above is/are correctly matched?**

- (a)** 1 only
- (b)** 1 and 2 only
- (c)** 2 only
- (d)** 1, 2 and 3

**Ans: (b)**
