# Why in News?

Recently, the <u>UNESCO (United Nations Educational, Scientific and Cultural Organization)</u> has released the **Global Education Monitoring Report 2023,** titled 'Technology in **Education: A Tool on Whose Terms' endorsed** ban on smartphones in schools **where technology integration does not improve learning.** 

# What are the Key Highlights of the Report?

- Rationale for Restricting Smartphone Usage:
  - The report highlighted that "mere proximity to a mobile device was found to distract students and to have a negative impact on learning in 14 countries, yet less than one in four have banned smartphone use in schools.
  - It cited a study of young people between the age 2 and 17 years which showed that higher screen time was associated with poorer well-being; less curiosity, self-control and emotional stability; higher anxiety; and depression diagnoses.
- Inequity in Access:
  - During the <u>Covid-19 Pandemic</u>, the rapid shift to online learning left out at least half a billion students worldwide, <u>disproportionately affecting the poorest</u> and those in rural areas.
- Limited Adaptation of Digital Technology:
  - The fast pace of technological change puts strain on education systems to adapt.
  - **Digital literacy and critical thinking skills** are crucial, especially with the growth of generative Al.
  - However, adaptation efforts are still in progress, with only a limited number of countries having defined skills and curricula for Al.
- Data Privacy:
  - Children's data are being exposed, yet only 16% of countries explicitly guarantee data privacy in education by law.
    - One analysis found that 89% of 163 education technology products recommended during the pandemic could survey children.
    - Further, 39 of 42 governments providing online education during the pandemic fostered uses that risked or infringed on children's rights.
- Consideration of Costs:
  - Many countries ignore the long-term financial implications of technology purchases, and the EdTech market continues to expand while basic education needs remain

#### unmet.

- Technology is often brought to plug a gap, with no view to the long-term costs for national budgets.
  - The cost of moving to basic digital learning in low-income countries and connecting all schools to the internet in lower-middle-income countries would add 50% to their current financing gap for achieving national <u>SDG (Sustainable</u> <u>Development Goals) 4</u> targets.

#### What are the Recommendations?

- There is a need for rigorous and impartial evidence of technology's effectiveness in learning.
  Policymakers need to have reliable evidence to make informed decisions about technology integration in education.
- Technology should enhance **learning experiences and support the well-being** of students and teachers rather than replace in-person, teacher-led instruction.
- The right to education is increasingly tied to meaningful connectivity, and it calls for setting benchmarks to connect all schools to the internet by 2030, with a focus on reaching marginalized communities.
- While technology offers potential benefits in education, it is essential to consider the long-term costs.

### What is UNESCO?

- UNESCO is a specialized agency of the <u>United Nations (UN)</u>. It seeks to build peace through international cooperation in Education, the Sciences and Culture.
- It is also a member of the United Nations Sustainable Development Group (UNSDG), a coalition of UN agencies and organizations aimed at fulfilling the SDGs.
- UNESCO's Headquarters are located in Paris and the Organization has more than 50 field offices around the world.
- It has 194 Members and 12 Associate Members and is governed by the General Conference and the Executive Board.
  - Three UNESCO member states are not UN members: Cook Islands, Niue, and Palestine.
  - While two UN member states (Israel, Liechtenstein) are not UNESCO members.
