

Intensified Mission Indradhanush 3.0 Scheme

Why in News

Recently, the **Intensified Mission Indradhanush (IMI) 3.0** scheme has been rolled out to cover children and pregnant women who missed routine immunisation during the **Covid-19** pandemic.

Key Points

- About the Intensified Mission Indradhanush (IMI) 3.0 Scheme:
 - Objective:
 - To reach the unreached population with all the available vaccines under Universal Immunisation Programme (UIP) and thereby accelerate the full immunization and complete immunization coverage of children and pregnant women.
 - Coverage:
 - It will have two rounds this year which will be conducted in 250 pre-identified districts/urban areas across 29 States/UTs.
 - The districts have been classified to reflect 313 low risk, 152 medium risk and 250 high risk districts.
 - Beneficiaries from migration areas and remote areas would be targeted as they may have missed their vaccine doses during the pandemic.
 - Significance: It will foster India's march towards the Sustainable Development Goals.
- Universal Immunization Programme:
 - Launch:
 - The Immunization Programme in India was introduced in 1978 as 'Expanded Programme of Immunization (EPI) by the Ministry of Health and Family Welfare.
 - In 1985, the Programme was modified as 'Universal Immunization Programme (UIP)'.
 - Objectives of the Programme:
 - Rapidly increasing immunization coverage,
 - Improving the quality of services,
 - Establishing a reliable cold chain system to the health facility level,
 - Introducing a district-wise system for monitoring of performance, and
 - Achieving self-sufficiency in vaccine production.
 - Analysis:
 - UIP prevents mortality and morbidity in children and pregnant women **against 12 vaccine-preventable diseases.** But in the past, it was seen that the increase in immunization coverage had slowed down and it increased at the rate of 1% per year between 2009 and 2013.
 - To accelerate the coverage, Mission Indradhanush was envisaged and

implemented since 2015 to rapidly increase the full immunization coverage to 90%.

• Mission Indradhanush:

Objective:

- To fully immunize more than 89 lakh children who are either unvaccinated or partially vaccinated under UIP.
- Targets children under 2 years of age and pregnant women for immunization.

Diseases Covered:

- Provides vaccination against 12 Vaccine-Preventable Diseases (VPD) i.e. diphtheria, Whooping cough, tetanus, polio, tuberculosis, hepatitis B, meningitis and pneumonia, Haemophilus influenzae type B infections, Japanese encephalitis (JE), rotavirus vaccine, pneumococcal conjugate vaccine (PCV) and measles-rubella (MR).
- However, Vaccination against Japanese Encephalitis and Haemophilus influenzae type B is being provided in selected districts of the country.

Intensified Mission Indradhanush 1.0:

• Launch:

• It was launched in October 2017.

Coverage:

- Under IMI, greater focus was given on urban areas which were one of the gaps of Mission Indradhanush.
- It focused to **improve immunisation coverage in select districts and cities** to ensure full immunisation to more than 90% by December 2018 instead of 2020.

Intensified Mission Indradhanush 2.0:

• Launch:

• It was a nationwide immunisation drive to mark the **25 years of** <u>Pulse polio</u> <u>programme</u> (2019-20).

Coverage:

- It had targets of full immunization coverage in 272 districts spread over 27 States
- It aimed to achieve at least 90% pan-India immunisation coverage by 2022.
