

Astro Robot

Why in News

Recently, **Amazon** has unveiled its '**Astro'** home robot, which is designed to help customers with a range of tasks like home monitoring and keeping in touch with family.

However, civil society has highlighted the concerns of privacy issues of 24×7 surveillance.

Key Points

About Astro Robot: //

- Astro is primed to be a home security device. It is designed to move around the home and keep a check on pets, and detect something unusual in the absence of the owner.
- It comes with a "periscope" camera that pops up from its head and can be used to keep an eye on the home.
- It is basically a combination of the **Echo Show (smart speaker)** and **sophisticated Ring security camera** integrated into one single device.
- The device captures live videos, recognises faces, plays music or videos, and delivers a beer across the home.
- It can **recognise the faces of people and analyse them** until it figures out if it's a family member or an outsider.
- Issues Related to Privacy:
 - Civil society is worried that the **amount of data** Amazon gets to fetch with the Astro, giving the company easy access to the household,
 - This is going one step beyond Alexa which had access to vocals and sound until now.
 - Amazon has asserted that **Astro stores face data locally** rather than in the cloud, but it is still a privacy concern as with any internet-connected device.
 - There are concerns of stealing or hacking of the device. Due to this, the perpetrator

can get access to the digital map that the robot creates of someone's home.

- The prime concern, in the long-run, could contribute to greater public acceptance of <u>Artificial Intelligence-powered surveillance</u>.
 - In the past, hackers have managed to access Ring cameras, used in the devices of Amazon technologies.

Other Recent Experiments:

- Softbank earlier this year "suspended" the production of **Pepper**, one of the first humanoid robots able to "read" emotions.
- Jibo has started an Indiegogo project, which aims to build a world's first social robot for the home.

Robotics

About:

- Robotics is a branch of engineering that involves the conception, design, manufacture and operation of robots.
 - Robot is any **automatically operated machine** that replaces human effort.
- The objective of the robotics field is to create intelligent machines that can assist humans in a variety of ways.

Advantages:

- In many situations robots can increase productivity, efficiency, quality and consistency of products.
- Robots can work in environments which are unsafe for humans as they don't have the same environmental requirements that humans do – such as lighting, air conditioning or noise protection.
- Robots have some sensors/actuators which are more capable than humans.
 - Unlike humans, robots don't get bored. Until they wear out, they can do the same thing again and again.
 - They can be very accurate to fractions of an inch (as is needed for example in manufacturing of microelectronics).

Disadvantages:

- The use of robots can create economic problems if they replace human jobs.
- Robots can only do what they are told to do they can't improvise
- This means that **safety procedures are needed** to protect humans and other robots.
- Although robots can be superior to humans in some ways, they are less dexterous than humans.
 - Robotics lack emotional intelligence, which plays a critical role in intense situations.
- Often robots are very costly in terms of the initial cost, maintenance, the need for extra components and the need to be programmed to do the task.
- Surveillance concerns pose a problem of entering a privacy nightmare.
