

Madhya Pradesh Classifies Heatwaves as Disasters

Why in News?

The Madhya Pradesh government has classified <u>heatwaves</u> as <u>natural disasters</u>, enabling compensation for victims.

Key Points

Financial Assistance:

 Individuals who suffer fatalities due to <u>heatwaves</u> will receive **compensation** similar to that provided for other natural calamities like floods and <u>earthquakes</u>.

Legal Framework:

- Heatwaves have been officially notified as a local disaster under the <u>Madhya Pradesh</u>
 <u>Disaster Management Act of 2005</u>, following directives from the **central Ministry of** Home Affairs.
- This regulation will take effect in summer 2025.

Casualties and Health Impact:

- Recent heatwaves in northern India resulted in 114 fatalities and over 40,000 suspected heatstroke cases reported from March 1 to June 19, 2024.
- The highest number of heatstroke deaths were recorded in Uttar Pradesh (37), Bihar (17), Rajasthan (16), and Odisha (13).

Nature of Heatwaves:

- Heatwaves are characterized by excessively high temperatures and high humidity, typically occurring from April to June.
- They pose serious health risks, including <u>heatstroke</u> and **dehydration**, and can severely impact agriculture, water supply, and public health.

Heat Waves

About:

- Heatwaves are prolonged periods of excessively hot weather that can cause adverse impacts on human health, the environment, and the economy.
 - India, being a tropical country, is particularly vulnerable to heatwaves, which have become more frequent and intense in recent years.

Criteria for Declaring Heat Wave in India:

Plains and Hilly Regions:

- Heat wave is considered if the maximum temperature of a station reaches at least 40°C or more for Plains and at least 30°C or more for Hilly regions.
- Based on Departure from Normal Heat Wave: Departure from normal is 4.50°C to 6.40°C.
 - Severe Heat Wave: Departure from normal is >6.40°C.
- Based on Actual Maximum Temperature Heat Wave: When actual maximum temperature ≥45°C.
 - **Severe Heat Wave:** When actual maximum temperature ≥47°C.
- If the above criteria are met in at least 2 stations in a Meteorological subdivision for at least two consecutive days, it is declared so on the second day.

Coastal Areas:

 When maximum temperature departure is 4.50°C or more from normal, a heat wave may be described provided the actual maximum temperature is 37°C or more.
