Why in News?

In a joint press release, the <u>World Health Organization (WHO)</u> and <u>United Nations Children's Fund</u> (<u>UNICEF</u>) announced that significant progress had been made in global immunization efforts during 2022.

 Over 4 million more children were vaccinated in 2022 compared to the year before, reflecting the collective efforts of countries and international organizations to combat vaccine-preventable diseases.

What is the Major Progress in Global Immunization Efforts?

- Positive Trends in Immunization Coverage:
 - DTP3 Vaccine Usage as a Global Marker:
 - The <u>DTP3 vaccine</u>, protecting against diphtheria, tetanus, and pertussis (whooping cough), serves as the standard indicator for immunization coverage worldwide.
 - In WHO South-East Asia Region, the number of zero-dose children (those that have not received even the first dose of DPT vaccine) halved to 2.3 million in 2022 from 4.6 million in 2021.
 - The coverage rate for DPT3 in India rose to an all-time of 93% in 2022, surpassing the previous pre-pandemic best of 91% recorded in 2019.
 - Recovery from Pandemic-related Disruptions:
 - Of the **73** countries that experienced significant declines in immunization coverage during the pandemic, **15** have recovered to pre-pandemic levels and 24 are on the road to recovery.
 - HPV Vaccination Rates:
 - <u>Human papillomavirus (HPV) vaccination</u> rates have returned to pre-pandemic levels, but they remain below the **90% target.**
- Lingering Disparities and Ongoing Challenges:
 - Uneven Recovery and System Strengthening:
 - While certain countries achieved remarkable recoveries, many smaller and poorer nations still face challenges in restoring immunization services.
 - 34 countries are stagnating or experiencing further declines in vaccination rates, underscoring the need for ongoing catch-up and system strengthening efforts.

- Measles Vaccination: A Cause for Concern:
 - Measles (viral disease that typically affects children) vaccination rates have not rebounded as effectively as other vaccines.
 - This has increased the risk of measles infections for an additional **35.2 million** children globally.
 - First dose measles vaccination coverage improved to **83% in 2022**, but it remains lower than the 86% achieved in 2019.

What are the Major Global Initiatives Related to Immunization?

- Immunization Agenda 2030 (IA2030): It sets an ambitious, overarching global vision and strategy for vaccines and immunization for the decade 2021–2030.
 - By the end of the decade, IA2030 aims to:
 - Reduce by 50% the number of children receiving zero vaccine doses
 - Achieve 500 introductions of new or under-utilized vaccines in low- and middleincome countries
 - Achieve 90% coverage for essential childhood vaccines
- World Immunization Week: It is celebrated every year in the last week of April.
 - Theme 2023 'The Big Catch-up'

What is the Status of Immunization in India?

- About:
 - Annually, India vaccinates more than 30 million pregnant women and 27 million children through its <u>Universal immunization programme</u>.
 - A child is considered fully immunized if they receive all the required vaccines as per the national immunization schedule within their first year of life.
 - However, according to **UNICEF**, only **65% of children in India** receive full immunization during the first year of their life.
- Major Immunization Programmes in India:
 - Universal Immunization Programme (UIP):
 - The program provides free immunization against 12 vaccine-preventable diseases.
 - Nationally Against 9 Diseases: Diphtheria, Pertussis, Tetanus, Polio, Measles, Rubella, severe form of Childhood Tuberculosis, Hepatitis B and Meningitis & Pneumonia caused by Hemophilus Influenza type B
 - Sub-nationally Against 3 Diseases: Rotavirus diarrhea, Pneumococcal Pneumonia and Japanese Encephalitis
 - Two major milestones of the UIP have been the <u>eradication of polio</u> in 2014 and the elimination of maternal and neonatal tetanus in 2015.
 - Mission Indradhanush:
 - Mission Indradhanush (MI) was launched by the Ministry of Health and Family Welfare (MOHFW) in 2014 with the aim to vaccinate all unvaccinated and partially vaccinated children under UIP.
 - It is being implemented in several phases.
 - Other Supporting Measures:
 - Electronic Vaccine Intelligence Network (eVIN) rollout.
 - National Cold Chain Management Information System (NCCMIS).

UPSC Civil Services Examination, Previous Year Question (PYQ)

- Q. 'Mission Indradhanush' launched by the Government of India pertains to (2016)
- (a) immunization of children and pregnant women
- (b) construction of smart cities across the country
- (c) India's own search for the Earth-like planets in outer space

Ans: (a)
