

Cholera

Why in News?

African countries are facing **Cholera vaccine shortage**, that is a looming threat amid increasing cholera cases in the region.

- Since the beginning of 2023, there have been 27,300 new cases of cholera including 687 deaths in five African countries.
- The <u>WHO (World Health Organization)</u> has said <u>Climate Change</u> could make cholera epidemics more common, as the bacteria that causes the disease can reproduce more quickly in warmer water.

What is Cholera?

- About:
 - It is a life-threatening infectious disease and a public health hazard.
 - Cholera is an acute, diarrheal illness caused by infection of the intestine with the bacterium Vibrio cholerae.
 - The infection is often mild or without symptoms, but sometimes can be severe.
- Symptoms:
 - Profuse watery diarrhoea, Vomiting, Leg cramps
- Transmission:
 - A person may get **cholera by drinking water or eating food contaminated** with the cholera bacterium.
 - The disease can spread rapidly in areas with inadequate treatment of sewage and drinking water.
- Vaccine:
 - Currently there are three WHO pre-qualified Oral Cholera Vaccines (OCV), Dukoral,
 Shanchol, and Euvichol-Plus.
 - All three vaccines require two doses for full protection.

What are the Initiatives to Curb Cholera?

- A global strategy on cholera control, Ending Cholera: a global roadmap to 2030, with a target to reduce cholera deaths by 90% was launched in 2017.
- Global Task Force for Cholera Control (GTFCC): WHO revitalized the Global Task Force for Cholera Control (GTFCC) to strengthen WHO's work in eradicating cholera.
 - The purpose of the GTFCC is to support increased implementation of evidence-based strategies to control cholera.
