

Barak River

Source: TH

Three bodies found floating in **Manipur's Barak River**, in Jiribam district, are believed to be victims of the ongoing <u>violence in the state</u>.

- Barak River: Originates from the Manipur hills in Senapati district. It flows along
 the Nagaland-Manipur border, enters Assam, and then Bangladesh, where it is known as
 the Surma and <u>Kushiyara</u>, and later as the Meghna (before receiving the combined flow of
 the <u>Ganga</u> and the <u>Brahmaputra</u>).
 - The principal tributaries of Barak are the Jiri, the Dhaleswari, the Singla, the Longai, the Sonai and the Katakhal.
 - The Barak sub-basin drains areas in India, Bangladesh and Burma. It is bounded by the
 Barail range separating it from the Brahmaputra basin on the north, by the Naga and
 Lushai hills on the east and by Mizo hills and territory of Bangladesh on the south and
 west.
 - The predominant soil types found in the sub-basin are <u>laterite</u> and red and <u>yellow soils</u>.
 - The Barak sub-basin is divided into two major physiographic regions: the hilly areas (home to tribal populations) and the plains, which are densely populated and extensively cultivated.
