

## **World Braille Day 2025**

Source: TH

<u>World Braille Day</u>, celebrated on 4th January, commemorates the birth of **Louis Braille**, the inventor of **Braille**, a tactile code that empowers **blind and visually impaired** individuals to access written information.

- Louis Braille: Louis Braille (1809–1852) was born in France, and lost his sight at the age of three.
  - At ten, he received a scholarship to the Royal Institute for Blind Youth in Paris, where he
    developed the Braille system after being inspired by an army captain's "night writing"
    system.
    - The "night writing" system, created by Charles Barbier de la Serre in 1815, used 12 raised dots and was designed for soldiers to communicate silently in the dark.
- **Braille System:** It uses 6 raised dots in a **3 × 2 matrix** to form characters, distinguishable by their arrangement.
  - Braille can be written with various tools, including slates, braille writers, and electronic devices.
  - Despite the rise of <u>Artificial Intelligence (AI)</u> and <u>voice</u> technologies, Braille remains crucial for independence, especially for those congenitally blind.
