

Improved Air Quality of Indian Cities

Why in News

Recently, the Minister of Environment, Forest and Climate Change, while speaking at the <u>International</u> <u>Day of Clean Air For Blue Skies</u>, informed that the number of cities with **improved air quality** had increased.

- On the occasion, he also inaugurated the **first functional Smog Tower at Anand Vihar** in Delhi and launched **Portal for Regulation of Air-pollution or 'Prana'.**
- Earlier, a <u>Smog Tower was installed</u> in Delhi's Connaught Place and India's <u>Tallest Air Purifier</u> was also inaugurated in Chandigarh.

Key Points

- Air Quality Status:
 - In 2020:
 - Cities with improved air quality had increased to 104 in 2020 from 86 in 2018.

Vision

- From 2015-2019:
 - Particulate Matter (PM) 10 levels: 23 cities marking a "decreasing trend", 239 cities a "fluctuating trend" & 38 cities an "increasing trend".
 - **PM 2.5 levels**: 11 cities showed a decreasing trend, 79 cities a fluctuating trend and 9 cities an increasing trend.
- Reason for Improvement:
 - <u>Covid-19</u> related lockdown had <u>resulted</u> in a "temporary improvement" of air quality in many cities due to closure of industries, fewer vehicles plying, drop in construction activities and absence of human activities.
 - Government initiatives to tackle air pollution also helped in improving air quality in recent years.
- Prana Portal:
 - It was launched under the **National Clean Air Programme (NCAP)** in Non-Attainment Cities (NAC), cities which didn't meet **Ambient Air Quality Standards** under NCAP.
 - It is targeted to **achieve 20-30% reduction in particulate matter** (PM10 and PM2.5) concentrations across the country by 2024.
 - It will support tracking of physical as well as financial status of **city air action plan implementation**, **and disseminate information** on air quality to the public.
- Related Initiatives:
 - System of Air Quality and Weather Forecasting and Research:
 - Known as "SAFAR", for greater metropolitan cities of India to provide location

specific information on air quality in near real time.

Air Quality Index:

- AQI is a tool for effective communication of air quality status to people in terms, which are easy to understand.
 - Graded Response Action Plan for Delhi and NCR has been prepared for implementation under different AQI categories.
- AQI has been developed for eight pollutants viz. PM2.5, PM10, Ammonia, Lead, nitrogen oxides, sulfur dioxide, ozone, and carbon monoxide.
- For Reducing Vehicular Pollution:
 - The introduction of **BS-VI vehicles**, push for **Electric Vehicles** (EVs), **Odd-Even** as an emergency measure and construction of the Eastern and Western Peripheral Expressways to reduce vehicular pollution.
- New Commission for Air Quality Management:
 - It is made for better coordination, research, identification, and resolution of problems related to air quality in the National Capital Region (NCR) and adjoining areas.
- Subsidy to farmers for buying <u>Turbo Happy Seeder (THS)</u> which is a machine mounted on a tractor that cuts and uproots the stubble, in order to reduce stubble burning.

Particulate Matter

- About:
 - Also called particle pollution, a term for a mixture of solid particles and liquid droplets found in the air. It causes respiratory problems and also reduces visibility.
 - It includes:
 - **PM10**: inhalable particles, with diameters that are generally 10 micrometers and smaller; and
 - **PM2.5**: fine inhalable particles, with diameters that are generally 2.5 micrometers and smaller.
- Sources of PM:
 - Some are emitted directly from a source, such as construction sites, unpaved roads, fields, smokestacks or fires.
