

## Promoting Coal Gasification in India

**For Prelims: Promoting Coal Gasification in India, [Coal Gasification](#), [Goods and Services Tax](#), [Input Tax Credit](#), [Syngas](#), [Natural Gas](#).**

**For Mains: Promoting Coal Gasification in India.**

**Source: PIB**

### Why in News?

The Ministry of Coal is considering a Comprehensive Scheme to promote [Coal Gasification](#), aiming to achieve **100 Million Tonne (MT) coal Gasification by FY 2030**.

- The Ministry is also considering an incentive to reimburse the [Goods and Services Tax \(GST\) compensation cess](#) on coal utilized in gasification projects for a period of 10 years after the commercial operational date (COD), provided that the GST compensation cess is extended beyond FY27. This incentive aims to offset the **inability of entities to claim [Input Tax Credit](#) for the same**.

### What are the Key Points of the Scheme?

- **About:**
  - The initiative incorporates a comprehensive set of **measures that capitalize on natural resources** and demonstrate financial and technical feasibility of [Coal Gasification](#).
  - It aims to attract Government PSUs and the Private Sector, fostering innovation, investment, and sustainable development in the coal gasification sector.
- **Process:**
  - The selection of entities for the coal/lignite gasification scheme will be carried out through a competitive and transparent bidding process.
  - The government will provide **budgetary support to eligible Government PSUs**, and Private sector enabling them to undertake coal gasification projects.
- **Significance:**
  - This initiative holds the potential to alleviate the **environmental burden by reducing carbon emissions** and fostering sustainable practices, contributing to our global commitments towards a greener future.

### What is Coal Gasification?

- **About:**
  - Coal gasification is a process in which **coal is partially oxidized with air, oxygen, steam or carbon dioxide** to form a fuel gas.
  - This gas is then used **instead of piped [Natural Gas](#)**, methane and others for deriving energy.
  - In-situ gasification of coal - or **Underground Coal Gasification (UCG)** - is the technique

of converting coal into gas while it is still in the seam and then extracting it through wells.

▪ **Production of Syngas:**

- It produces **Syngas** which is a mixture consisting primarily of **methane (CH<sub>4</sub>)**, **carbon monoxide (CO)**, **hydrogen (H<sub>2</sub>)**, **carbon dioxide (CO<sub>2</sub>)** and water vapour (H<sub>2</sub>O).
- Syngas can be used to produce a **wide range of Fertilizers, Fuels**, solvents and synthetic materials.

▪ **Significance:**

- Steel companies can **reduce costs by replacing expensive imported coking coal with syngas** from coal gasification plants in their manufacturing process.
- It is primarily used for electricity generation, for the production of chemical feedstocks.
- The hydrogen obtained from coal gasification can be used for various purposes such as making ammonia and powering a hydrogen economy.

▪ **Concerns:**

- The syngas process converts a **relatively high-quality energy source (coal) to a lower quality state (gas)** and consumes a lot of energy in doing so. Thus, the efficiency of conversion is also low.

## What is the Need for Promoting Coal Gasification Projects in India?

- The adoption of gasification technology in India can **revolutionize the coal sector, reducing reliance on imports** of Natural Gas, Methanol, Ammonia and other essential products.
  - Currently, India **imports approximately 50% of its Natural Gas**, over 90% of its total Methanol consumption and around 13-15% of its total ammonia consumption to cater to the domestic demand.
- It can contribute to India's vision of becoming **Aatmanirbhar** and create a surge in employment opportunities.
- The implementation of **coal gasification is expected to make significant contributions** to the nation's development by reducing imports by 2030.

## Way Forward

- The government should conduct a **comprehensive evaluation of the environmental, economic, and social implications** of coal gasification projects.
- Continued investment in research and development can **drive advancements in coal gasification technology**, making it more efficient and environmentally friendly.
- Emphasize the development of a **diversified energy mix that includes renewable energy sources**, energy efficiency measures, and sustainable alternatives to coal-based energy production.
- Learn from global experiences and best practices in coal gasification and hydrogen **economy implementation to ensure sustainable development.**
