

Manouria impressa: Arunachal Pradesh

A tortoise named 'Manouria impressa' has been discovered in Arunachal Pradesh. Manouria is a genus of

tortoises. //

- Manouria impressa is one of the only four species of forest-dwelling tortoise occurring in Southeast Asia.
 - This is the smaller of two species of the genus Manouria (Manouria oyamai and Manouria punjabiensis), the other being the larger Asian Giant Tortoise (Manouria emys).
- Previously, the tortoise was believed to be restricted to western Myanmar, along with pockets of habitat in Thailand, Laos, Vietnam, Cambodia, and southern China, and south through Peninsular Malaysia.
 - The species was last found in Gwa in Myanmar.
- The species is **threatened by poaching** primarily for traditional medicine and pet trade.
- It is **listed on CITES Appendix II**, and has been classified as **Vulnerable by the IUCN Red List**.

Asian Forest Tortoise

- Asian forest tortoise (Manouria emys), also known as Asian brown tortoise, is a species of tortoise found in India (Assam), Bangladesh, Burma (or Myanmar), Thailand, Malaysia and Indonesia (Sumatra, Borneo).
- It is the largest tortoise in mainland Asia.
- This is a relatively rare turtle, listed on CITES Appendix II, and classified as Endangered by the IUCN Red List.
