

Study to Revive Bison Population | Jharkhand | 21 Jan 2025

Why in News?

Recently, the **Jharkhand** Forest Department launched a **study to revive the declining population of <u>Bison</u>**, commonly known as Gaur, at **<u>Palamu Tiger Reserve (PTR)</u>**.

Key Points

- Bison Population Status in Jharkhand:
 - Bison, an important food source for big cats, has **gone extinct across Jharkhand,** except in the Palamu Tiger Reserve (PTR).
 - The **current bison population in PTR is between 50 and 70,** a significant decline from the 1970s, when it stood at around 150.
- Reasons for Decline:
 - Major factors include poaching, infections, and habitat disturbances caused by local cattle.
 - Domestic cattle, numbering over 1.5 lakh, occupy the bison's habitat, consuming their food and spreading infections like <u>mouth and foot disease</u>.
- Current Conservation Efforts:
 - The PTR authority has **initiated a study to assess factors affecting bison survival**, including habitat improvement and grass species preferences.
 - A comprehensive revival plan will be created after the study.
 - To curb the spread of diseases, a vaccination drive is underway to vaccinate 1.5 lakh domestic cattle from 190 surrounding villages.
 - Grassland improvement and anti-poaching measures are also being strengthened.
- Core and Buffer Zone Management:
 - PTR spans 1,129.93 sq km, with 414.08 sq km designated as core (critical <u>tiger</u> habitat) and 715.85 sq km as a buffer zone.
 - **Betla National Park** occupies 226.32 sq km of PTR, with 53 sq km in the buffer zone open to tourists.
 - Efforts are underway to relocate eight of the 34 villages within PTR limits to protect core habitats.

The Bison

//

- About:
 - The Indian Bison or Gaur (Bos gaurus) is the tallest species of wild cattle found in India and largest extant bovine.
 - There are about **13,000 to 30,000 gaurs in the world** with approximately **85% of the population present in India.**
 - The <u>first-ever population estimation exercise</u> of the Indian gaur carried out in <u>the Nilgiris Forest Division</u> in February 2020 estimated around **2,000 Indian** gaurs to be inhabiting the division.
- Geography:
 - It is native to South and Southeast Asia.
 - In India, they are very much prevalent in the Western Ghats.
 - They are primarily found in <u>Nagarhole National Park</u>, <u>Bandipur National Park</u>,
 - Masinagudi National Park and Biligirirangana Hills (BR Hills).
 - It is also found in Burma and Thailand.
- Habitat:
 - They prefer evergreen forests and moist deciduous forests.
 - They are **not found in the Himalayas** with an altitude greater than 6,000 ft.
- Conservation Status:
 - Vulnerable in <u>IUCN Red List.</u>
 - Included in the Schedule I of the Wild Life Protection Act, 1972.
